Encyclopedia of Technological Hazards and Disasters in the Social Sciences Duane A. Gill, Liesel A. Ritchie, Nnenia M. Campbell, 2024-11-08

The Encyclopedia of Technological Hazards and Disasters in the Social Sciences brings together an array of global experts to investigate, explore, and analyse human caused disaster events. Providing insights into both the origins and aftermaths of disaster events, it offers advanced understanding of a broad range of disaster events facing society during the Anthropocene.

Urban Disaster Mitigation: The Role of Engineering and Technology F.Y. Cheng, M.-S. Sheu, 1995-07-21. Great loss of human life, structural damage, and social and economic upheaval occur repeatedly due to such natural hazards as earthquakes, typhoons, hurricanes, landslides, floods, and tsunamis. Both the US and Taiwan, along with many other countries, have a history of such occurrences and a common need to reduce their effects. This volume includes papers from the fourth symposium/workshop held jointly between the US and Taiwan to discuss research and its application to multiple hazard mitigation. The workshop, Urban Disaster Mitigation: The Role of Engineering and Technology, discussed lessons learned from recent natural disasters, assessed results of Taiwan's multiple hazards research program, and potential application to the US and proposed further studies on subjects of mutual concern. Topics include recent scientific findings obtained in various natural hazard areas and assessment of actual and potential damage from earthquakes, floods, and landslides. Of particular importance are measures that can be taken to mitigate these hazards, ranging from use of new algorithms for structural engineering to warning systems for a given region. At a time when natural disasters are widespread, engineers play a key role. Construction methods and building codes are changing; current knowledge shapes the direction of these changes. The research results presented in these proceedings will benefit both the academic and practicing communities around the world, strengthening the relationship between these two important parties.

National Earthquake Resilience National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on Seismology and Geodynamics, Committee on National Earthquake Resilience—Research, Implementation, and Outreach, 2011-09-09. The United States will certainly be subject to damaging earthquakes in the future. Some of these earthquakes will occur in highly populated and vulnerable areas. Coping with moderate earthquakes is not a reliable indicator of preparedness for a major earthquake in a populated area. The recent disastrous magnitude 9 earthquake that struck northern Japan demonstrates the threat that earthquakes pose. Moreover, the cascading nature of impacts from the earthquake, causing a tsunami, cutting electrical power supplies, and stopping the pumps,

needed to cool nuclear reactors demonstrates the potential complexity of an earthquake disaster. Such compound disasters can strike any earthquake-prone populated area. National Earthquake Resilience presents a roadmap for increasing our national resilience to earthquakes. The National Earthquake Hazards Reduction Program (NEHRP) is the multi-agency program mandated by Congress to undertake activities to reduce the effects of future earthquakes in the United States. The National Institute of Standards and Technology (NIST) the lead NEHRP agency commissioned the National Research Council (NRC) to develop a roadmap for earthquake hazard and risk reduction in the United States that would be based on the goals and objectives for achieving national earthquake resilience described in the 2008 NEHRP Strategic Plan. National Earthquake Resilience does this by assessing the activities and costs that would be required for the nation to achieve earthquake resilience in 20 years. National Earthquake Resilience interprets resilience broadly to incorporate engineering, science, physical, social, economic, behavioral, and institutional governing dimensions. Resilience encompasses both pre-disaster preparedness activities and post-disaster response. In combination, these will enhance the robustness of communities in all earthquake-vulnerable regions of our nation so that they can function adequately following damaging earthquakes. While National Earthquake Resilience is written primarily for the NEHRP, it also speaks to a broader audience of policy makers, earth scientists, and emergency managers. Natural Hazards Observer, 2007 Prediction and Perception of Natural Hazards J. Nemec, J.M. Nigg, F. Siccardi, 2013-06-29. This collection of articles provides a unique overview of the state of the science in the prediction of and response to natural disaster events. The uniqueness of this volume is that it comprises more than just the physical science perspective. For each natural hazard included in this text, social scientists have provided research summaries of how public perceptions are related to the actions that are likely to be undertaken when people are confronted with information about the existence of a natural hazard threat. In this book, the reader can find a truly international characterization of both hazard perception and prediction. The American and European contributors provide state-of-the-science overviews of empirically based research knowledge that expands beyond any national boundaries. This approach has resulted in broader understanding of what is currently known about predicting natural hazard events and predicting how those events or warnings of them will be responded to by different types of societies. **The elements of social science; or, Physical, sexual, and natural religion, by a graduate of medicine [G. Thoroughly revised and updated and now with a more global perspective, the second edition of this accessible text provides an integrated framework for understanding and managing natural hazards.
