**Antwerpen 1915      The Blitz and Its Legacy** Mark Clapson, Peter J. Larkham, 2013 The Blitz and Its Legacy is a fascinating volume which includes war experiences of destruction architecture urban design the political process of planning and reconstruction and also popular perceptions of rebuilding Its findings provide very timely lessons which highlight the value of learning from historical precedent Drawing together leading scholars and new researchers from across the fields of planning history architecture and geography this volume presents an historical and cultural commentary on the immediate and longer term impacts of wartime destruction

**Deprivation, State Interventions and Urban Communities in Britain, 1968-79** Peter Shapely, 2017-08-16 Focusing on a series of policy initiatives from the late 1960s through to the end of the 1970s this book looks at how successive governments tried to address growing concerns about urban deprivation across Britain It provides unique insights into policy and governance and into the socio economic and cultural causes and consequences of poverty Starting with the impact of redevelopment policies immigration and the rise of the inner city this book examines the pressures and challenges that explain the development of policy by successive Labour and Conservative governments It looks at the effectiveness and limits of different community development approaches and at the inadequacies of policy in tackling urban deprivation In doing so the book highlights the restricted impact of pilot projects and reform of public services in resolving deprivation as well as the broader limits of social planning and state welfare Crucially it also plots the shift in policy from an emphasis on achieving statutory service efficiencies and rolling out social development programmes towards an ever

greater stress on regeneration and support for private capital as the solution to transforming the inner city

Contemporary Archaeology and the City Laura McAttackney, Krysta Ryzewski, 2017-07-14 Contemporary Archaeology and the City foregrounds the archaeological study of post industrial and other urban transformations through a diverse international collection of case studies. Over the past decade, contemporary archaeology has emerged as a dynamic force for dissecting and contextualizing the material complexities of present day societies. Contemporary archaeology challenges conventional anthropological and archaeological conceptions of the past by pushing temporal boundaries closer to, if not into, the present. The volume is organized around three themes that highlight the multifaceted character of urban transitions in present day cities: creativity, ruination and political action. The case studies offer comparative perspectives on transformative global urban processes in local contexts through research conducted in the struggling post industrial cities of Detroit, Belfast, Indianapolis, Berlin, Liverpool, Belém and post Apartheid Cape Town, as well as the thriving urban centres of Melbourne, New York City, London, Chicago and Istanbul. Together the volume contributions demonstrate how the contemporary city is an urban palimpsest comprised by archaeological assemblages of the built environment, the surface and buried sub-surface, that are traces of the various pasts entangled with one another in the present. This volume aims to position the city as one of the most important and dynamic arenas for archaeological studies of the contemporary by presenting a range of theoretically engaged case studies that highlight some of the major issues that the study of contemporary cities pose for archaeologists.

Planning Perspectives for Education Aubrey Pearre Johnston, James F. McNamara, 1975      British Economic and Social History R. C. Richardson, William Henry Chaloner, 1996      European Cities, 1890-1930s Helen Elizabeth Meller, 2001

1890-1930 was a formative period in the evolution of the modern town planning movement. It was a time when the relationship between social development and the physical environment in all its complexities was being explored and when the prospect of future change could run ahead of the problems of implementation. This study highlights the richness and variety of European responses to modernisation by offering a comparative approach to exploring these themes in cities in Britain, France, Germany, Spain and Central Europe. Of key importance in the development of European cities during this period was the First World War, which accelerated technological changes at the same time as inspiring both nostalgia for the past and a desire to create new ways of urban living. For large provincial cities that had grown in the 19th century, imagining a new future was the greatest challenge. What kind of understanding was necessary to promote effective new developments? How could these be implemented in the face of economic, social and political change? Who made the decisions? Answers to these questions must be drawn from a number of directions from the political and administrative structures of nation states, from the economic and social history of Europe, from the growth of new professional expertise in dealing with urban problems and the international exchange of ideas from the specific histories of cities and from the actions of individuals who were ultimately responsible for creating new possibilities.      Ottawa--making a Capital Jeff Keshen, Nicole J. Combined Arms Warfare in the Twentieth Century Jonathan Mallory House,2001 For centuries the world has witnessed the development and use of increasingly complex and powerful military systems and technologies In the process the art of war has truly become the art of combined arms warfare in which infantry artillery air support intelligence and other key elements are all coordinated for maximum effect Nowhere has this trend been more visible than in the history of twentieth century warfare Originally published as an essential in house study for U S Army officers during the 1980s this much revised and expanded edition remains the most complete study available on the subject Rewritten with a much wider readership in mind it both retains its enormous practical utility for military professionals and provides a valuable and appealing introduction for scholars and general readers Jonathan House author of the original work brings the story of combined arms up to the present covering among other things Desert Storm the war in Chechnya and the rise of smart weapons and related technologies He traces the evolution of tactics weapons and organization in five major militaries American British German Russian and French over 100 years of warfare Revealing both continuities and contrasts within and between these fighting forces he also provides illuminating glimpses of Israeli and Japanese contributions to combined arms doctrine Expanding his insightful analysis of the world wars and the wars in Korea and Vietnam House also offers much new material focused on the post Vietnam period Throughout he analyzes such issues as command and control problems of highly centralized organizations the development of special operations forces advances in weapons technology including ballistic and anti ballistic missile systems the trade offs involved in using heavy versus light armed forces and the enduring obstacles to effective cooperation between air and land forces His strong critique of the air superiority propaganda that came out of the Gulf War is sure to spark some heated debates Rigorously comparative House s study addresses significant questions about how nations prepare for war learn or don t learn its harsh lessons and adapt to changing times and technologies Unique in the annals of the literature on warfare it will be the standard work on this subject for a long time to come

Arsenal of World War II Paul A. C. Koistinen,2004 Prolific munitions production keyed America s triumph in World War II but so did the complex economic controls needed to sustain that production Artillery tanks planes ships trucks and weaponry

of every kind were constantly demanded by the military and readily supplied by American business. While that relationship was remarkably successful in helping the U.S. win the war, it also raised troubling issues about wartime economies that have never been fully resolved. Paul Koistinen's fourth installment of a monumental five volume series on the political economy of American warfare focuses on the mobilization of national resources for a truly global war. Koistinen comprehensively analyzes all relevant aspects of the World War II economy from 1940 through 1945, describing the nation's struggle to establish effective control over industrial supply and military demand and revealing the growing partnership between the corporate community and the armed services. Koistinen traces the evolution of federal agencies mobilizing for war, including the National Defense Advisory Commission, the Office of Production Management, and the Supply Priorities and Allocation Board, and then focuses on the work of the War Production Board from 1942-1945. As the war progressed, the WPB and related agencies oversaw the military's supply and procurement systems, stabilized the economy while financing the war, closely monitored labor relations and controlled the shipping and rationing of fuel and food. In chronicling American mobilization, Koistinen reveals how representatives of industry and the armed services expanded upon their growing prewar ties to shape policies for harnessing the economy and how federal agencies were subsequently riven with dissension as New Deal reformers and anti-New Deal corporate elements battled for control over mobilization itself. As the armed services emerged as the principal customers of a command economy, the military-industrial nexus consolidated its power and ultimately succeeded in bending the reformers to its will. The product of exhaustive archival research, *Arsenal of World War II* shows that mobilization meant more than simply harnessing the economy for war; it also involved struggles for power and position among a great many interest groups and ideologies. Nearly two decades in the making, it provides an ambitious and enormously insightful overview of the emergence of the military-industrial economy, one that still resonates today as America continues to wage wars around the globe.

*Moral Issues in Military Decision Making* Anthony E. Hartle, 2004. Much has changed in warfare in recent years, with America now dominant on the international scene and terrorism the new enemy. In light of these changes, the need for moral grounding in military actions is a more pressing concern than ever. When it was originally published, *Moral Issues in Military Decision Making* reflected the concerns posed by nuclear stalemate and the lessons of Vietnam. In that highly praised work, Anthony Hartle outlined the essential elements of the Professional Military Ethic created for American military forces. In this new edition, he reexamines the moral foundations for America's military leadership in the post-9/11 era. Considering world affairs since the first edition—the Gulf War, Bosnia, Afghanistan, Iraq, 9/11, and the emergence of the United States as an unrivaled military power—Hartle explains how these events have raised ethical issues that differ dramatically from those of the Cold War, by the war on terrorism, homeland defense, asymmetric warfare, the proliferation of American military interventions, and the UN's role in peacekeeping operations. Using meticulously analyzed case studies twice as many as in the

first edition he considers such moral dilemmas as torture challenging superior officers use of overwhelming force and responding to fire in the presence of civilian shields In this revision Hartle examines further the status of professional military ethics in light of current affairs changes in the articulation of military values and recent research In a new chapter on human rights he relates moral principles directly to values embedded in the Constitution and argues that overwhelming American military power cannot succeed unless it is accompanied by the moral force of the values it seeks to protect difficulties of applying conventional laws of war and human rights doctrine in military operations Hartle convincingly shows that national security is as much about the preservation of moral principles as it is about the protection of America's citizens and borders His book demonstrates that the American military must continue to observe those principles in order to be effective in its primary mission

Stalin's Guerrillas Kenneth Slepian, 2006 A detailed study of the operations politics culture and autonomy of Soviet partisans or guerrillas who fought the German army in WWII Blending military political social and cultural history Slepian also provides a prism for viewing relations between the suffocating Stalinist state and its independent partisan warriors
