Sociogenesis Of Language And Human Conduct:

The Sociogenesis of Language and Human Conduct Bruce Bain, 2013-11-11 Michael Cole To the unwary reader even the table of contents of this book will appear incongruous. What notion let alone set of principles could bring coherence to the following concepts playing peekaboo with small children aging human alienation conversations with Uzbeki peasants toolmaking sexism the world of the deaf the ecology of hunting groups After sfhe has had a chance to scan the entire set the reader can see that this book seems to center on language. But it clearly is not a book about linguistics. It is about a notion that combines two other notions that we usually find located in very different kinds of books language and human nature. There is no widely accepted term for this combined notion. It does not fit into those ways of thinking of the world that have gotten us where we are. Walker Percy philosopher novelist succinctly nails the source of our problem. The importance of a study of language as opposed to a scientific study of a space time event like a solar eclipse or rat behavior is that as soon as one scratches the surface of the familiar and comes face to face with the nature of language one also finds himself face to face with the nature of man 1975 p 10. Once we reinvent this insight its implications begin to work into our lives our central problem becomes to figure out how to deal with the dilemmas it implies

Ethnography, Linguistics, Narrative Inequality

Dell Hymes, 2003-09-02 This collection of work addresses the contribution that ethnography and linguistics make to education and the contribution that research in education makes to anthropology and linguistics. The first section of the book pinpoints characteristics of anthropology that most make a difference to research in education. The second section describes the perspective that is needed if the study of language is to contribute adequately to problems of education and inequality. Finally the third section takes up discoveries about narrative which show that young people's narratives may have a depth of form and skill that has gone largely unrecognized

Language and Power. The Implications of Language for Peace and Development

Birgit Brock-Utne, 2008-12-31

Language is a tool used to express thoughts to hide thoughts or to hide lack of thoughts. It is often a means of domination. The question is who has the power to define the world around us. This book demonstrates how language is being manipulated to form the minds of listeners or readers. Innocent words may be used to conceal a reality which people would have reacted to had the phenomena been described in a straightforward manner. The nice and innocent concept cost sharing which leads our thoughts to communal sharing and solidarity may actually imply privatization. The false belief that the best way to learn a foreign language is to have it as a language of instruction actually becomes a strategy for stupidification of African pupils. In this book 33 independent experts from 16 countries in the North and the South show how language may be used to legitimize war making promote Northern interests in the field of development and retain colonial speech as languages of instruction languages of the courts and in politics. The book has been edited by two Norwegians Birgit Brock Utne is a professor at the University of Oslo and a consultant in education and development. From 1987 until 1992 she was a professor at the University

of Dar es Salaam Gunnar Garbo author and journalist and former member of the Norwegian Parliament was the Norwegian Ambassador to Tanzania from 1987 to 1992 *Constraints on Language Acquisition* Helen Tager-Flusberg,2014-02-25 After decades of research most scholars generally agree that language acquisition is a complex and multifaceted process that involves the interaction of innate biologically based mechanisms devoted to language other non linguistic cognitive and social mechanisms linguistic input and information about the social and physical world Theoretical work in the field of language acquisition now needs to focus in greater depth and detail on some specific aspects of this general model which is the main goal of this book The chapters in this volume provide some new insights into one of the most remarkable accomplishments achieved by almost all children The particular questions that are raised by contributors include What kinds of constraints operate on the process of language development Which aspects of the acquisition process depend on language specific mechanisms Are there critical brain structures necessary for the acquisition of language What role do cognitive and social mechanisms play in language development How critical is perceptual input about the physical and social world What is the specific role played by linguistic input in the child s construction of a linguistic system Questions are addressed from the perspective of children who come to the task of acquiring language with many hurdles to overcome including deafness and blindness mental retardation autism and prenatal or perinatal brain damage involving the left hemisphere Each section contributes some insight on how an innate language specific biological substrate interacts with cognitive and social factors as well as external information to support the child s construction of a linguistic system Studies of atypical children offer a singular contribution to this enterprise by allowing us to see the specific influences of each component and in turn they shed new light on how all children are able to acquire language so effortlessly and during such a brief period of development
