

# The IPAT Equation

The IPAT equation is a widely used simplification of the factors causing environmental degradation. The equation is  $I = P \times A \times T$ . This is short for environmental Impact = Population x Affluence (consumption per person) x Technology (impact per unit of consumption). It's crucial to remember that the three factors are intermediate causes, not root causes.

$$\text{Impact} = \text{Population} \times \frac{\text{consumption}}{\text{per person}} \times \frac{\text{impact}}{\text{per unit of consumption}}$$
$$I \quad P \quad A \quad T$$

## **Taking Population Out Of The Equation Reformulating Ipat:**

**Dangerous Intersections** Jael Miriam Silliman, Ynestra King, 1999 This anthology offers a multicultural international look at the issues of environment development and population control Feminist scholars and activists reveal the racism behind the scapegoating of women the poor and immigrants as the source of major world problems and present realistic solutions that rely on the ingenuity and resourcefulness of women

**Taking Population Out of the Equation** H. Patricia Hynes, 1993

**Too Many People?** Ian Angus, Simon Butler, 2011 Too Many People provides a clear well documented and popularly written refutation of the idea that overpopulation is a major cause of environmental destruction arguing that a focus on human numbers not only misunderstands the causes of the crisis it dangerously weakens the movement for real solutions No other book challenges modern overpopulation theory so clearly and comprehensively providing invaluable insights for the layperson and environmental scholars alike Ian Angus is editor of the ecosocialist journal Climate and Capitalism and Simon Butler is co editor of Green Left Weekly

**Environments, Natures and Social Theory** Damian White, Alan Rudy, Brian Gareau, 2017-09-16 From climate change to fossil fuel dependency from the uneven effects of natural disasters to the loss of biodiversity complex socio environmental problems indicate the urgency for cross disciplinary research into the ways in which the social the natural and the technological are ever more entangled This ground breaking text moves between environmental sociology and environmental geography political and social ecology and critical design studies to provide a definitive mapping of the state of environmental social theory in the age of the anthropocene

Environments Natures and Social Theory provokes dialogue and confrontation between critical political economists actor network theorists neo Malthusians and environmental justice advocates It maps out the new environmental politics of hybridity moving from hybrid neo liberals to end times ecologists from post environmentalists to cyborg eco socialists White Rudy and Gareau insist on the necessity of a critical but optimistic hybrid politics arguing that a more just egalitarian democratic and sustainable anthropocene is within our grasp This will only be brought into being however by reclaiming celebrating and channeling the reconstructive potential of entangled hybrid humans as inventive hominids creative gardeners critical publics and political agents Written in an accessible style Environments Natures and Social Theory is an essential resource for undergraduate and postgraduate students across the social sciences

**The America Syndrome** Betsy Hartmann, 2017-05-23 Has apocalyptic thinking contributed to some of our nation's biggest problems inequality permanent war and the despoiling of our natural resources From the Puritans to the present historian and public policy advocate Betsy Hartmann sheds light on a pervasive but until now invisible theme shaping the American mindset apocalyptic thinking or the belief that the end of the world is nigh Hartmann makes a compelling case that apocalyptic fears are deeply intertwined with the American ethos to our detriment In The America Syndrome she seeks to reclaim human agency and in so doing revise the national narrative By changing the way we think we just might change the world

*Barry Commoner and the Science of*

*Survival* Michael Egan, 2009-01-23 Chronicles the activist career of Barry Commoner one of the most influential American environmental thinkers and his role in recasting the environmental movement after World War II For over half a century the biologist Barry Commoner has been one of the most prominent and charismatic defenders of the American environment appearing on the cover of Time magazine in 1970 as the standard bearer of the emerging science of survival In Barry Commoner and the Science of Survival Michael Egan examines Commoner's social and scientific activism and charts an important shift in American environmental values since World War II Throughout his career Commoner believed that scientists had a social responsibility and that one of their most important obligations was to provide citizens with accessible scientific information so they could be included in public debates that concerned them Egan shows how Commoner moved naturally from calling attention to the hazards of nuclear fallout to raising public awareness of the environmental dangers posed by the petrochemical industry He argues that Commoner's belief in the importance of dissent the dissemination of scientific information and the need for citizen empowerment were critical planks in the remaking of American environmentalism Commoner's activist career can be defined as an attempt to weave together a larger vision of social justice Since the 1960s he has called attention to parallels between the environmental civil rights labor and peace movements and connected environmental decline with poverty injustice exploitation and war arguing that the root cause of environmental problems was the American economic system and its manifestations He was instrumental in pointing out that there was a direct association between socioeconomic standing and exposure to environmental pollutants and that economics not social responsibility was guiding technological decision making Egan argues that careful study of Commoner's career could help reinvigorate the contemporary environmental movement at a point when the environmental stakes have never been so high
