Philosophy of Science Wang Wei, 2020-12-29 The book is a translation of the second edition of a much used and research based Chinese textbook As a succinct and issue based introduction to the Western philosophy of science the book brings eight focal issues in the field to the fore and augments each topic by incorporating Chinese perspectives Followed by an overview of the historical framework and logical underpinnings of the philosophy of science the book thoroughly discusses eight issues in the discipline 1 the criteria of cognitive meaning 2 induction and confirmation 3 scientific explanation 4 theories of scientific growth 5 the demarcation between science and pseudoscience 6 scientific realism and empiricism 7 the philosophy of scientific experimentation 8 science and value Not confined to Western mainstream discourse in this field the book also introduces voices of Chinese philosophers of note and adopts a stance that productively combines logical empiricism and Kuhnianism both of which tend to be covered in less detail by many English language textbooks In the final chapter the author offers a prognosis regarding the future of the discipline based on recent trends This book will be of value to students who study philosophy of science and hope to gain a better understanding of science and technology

Self-Organizing Natural Intelligence Myrna Estep, 2006-12-26 Self Organizing Natural Intelligence brings new scientific methods to intelligence research that is currently under the influence of largely classical 19th century single causal theory and method This out dated classical approach has resulted in the single capacity g theory a central processor top down genetically determined linguistic view of intelligence that is directly contradicted by empirical facts of human and animal studies of intelligence This book proposes utilizes and demonstrates the research superiority of a highly developed multidisciplinary theory models approach to intelligence With conceptual tools concepts and mathematical methods more suited to continuous dynamic phenomena of living things the entire scope of natural intelligence based upon empirical studies of actual human and animal experience is addressed Results show that human and animal intelligence is largely self organizing and emergent across a spectrum of major categories of kinds of natural intelligence not limited to a single top

down capacity as current proponents of the single capacity g theory and IQ approach support. Contrary to the single capacity verbal theory of intelligence, this work argues and shows evidence for three major categories of natural intelligence: Overwhelming empirical evidence is given to show that our understanding of cognition itself must be broadened to include nonverbal immediate awareness as a category of natural intelligence that is embedded within sensory and somatosensory motor processes that make possible yet another category of intelligence: knowing how. While most current theories of intelligence assume that the mind is entirely computational and also assume that sensation is cognitively neutral having no intentionality, here empirical evidence is presented from numerous clinical studies showing that certain primitive sensory processes are not cognitively neutral nor do they require a representational language interface in order to be accessible to cognitive intelligence processes. This volume describes a rigorous treatment and exhaustive classification of natural intelligence while also demonstrating a more adequate scientific and mathematical approach than current statistical and psychometric approaches shoring up the out dated and misused IQ hypothetical construct.

The Talent Delusion Tomas

Chamorro-Premuzic, 2017-02-02 This book shows how to find, attract, develop, motivate and retain stars. It's full of evidence and provocative ideas to help every talent leader. Dr. Adam Grant, Wharton Professor, New York Times bestselling author of *Originals* and *Give and Take*. This is the book I want to hand every manager I've ever worked with. Every chapter is filled with quotes, findings and ideas that I want to post on Twitter and share with the world. Dr. Todd Carlisle, VP of HR, Twitter. **WHY THE SCIENCE OF PEOPLE IS YOUR KEY WEAPON IN THE WAR FOR TALENT** All organisations have problems and they nearly always concern people: how to manage them, whom to hire, fire or promote and how to motivate, develop and retain high potential employees. Psychology, the main science for understanding people, should be a pivotal tool for solving these problems, yet most companies play it by ear and billions of dollars are wasted on futile interventions to attract and retain the right people for key roles. Bridging the gap between the psychological science of talent and common real world talent practices, *The Talent Delusion* aims to educate HR practitioners and leaders on how to measure, predict and manage talent. It
