Ecological Systems And The Environment:

Ecological Systems and the Environment Theodore C. Foin, 1976 Ecological Systems and the Environment Foin, Theodore C. Foin, 1976 Ecological Systems Rik Leemans, 2012-12-12 Earth is home to an estimated 8 million animal species 600 000 fungi 300 000 plants and an undetermined number of microbial species Of these animal fungal and plant species an estimated 75% have yet to be identified Moreover the interactions between these species and their physical environment are known to an even lesser degree At the same time the earth's biota faces the prospect of climate change which may manifest slowly or extremely rapidly as well as a human population set to grow by two billion by 2045 from the current seven billion Given these major ecological changes we cannot wait for a complete biota data set before assessing planning and acting to preserve the ecological balance of the earth This book provides comprehensive coverage of the scientific and engineering basis of the systems ecology of the earth in 15 detailed peer reviewed entries written for a broad audience of undergraduate and graduate students as well as practicing professionals in government academia and industry The methodology presented aims at identifying key interactions and environmental effects and enabling a systems level understanding even with our present state of factual knowledge **The Ecosystem Approach** David Waltner-Toews, James J. Kay, Nina-Marie E. Lister, 2008-08-11 Is sustainable development a workable solution for today's environmental problems Is it scientifically defensible Best known for applying ecological theory to the engineering problems of everyday life the late scholar James J. Kay was a leader in the study of social and ecological complexity and the thermodynamics of ecosystems Drawing from his immensely important work as well as the research of his students and colleagues The Ecosystem Approach is a guide to the aspects of complex systems theories relevant to social ecological management Advancing a methodology that is rooted in good theory and practice this book features case studies conducted in the Arctic and Africa in Canada and Kathmandu and in the Peruvian Amazon Chesapeake Bay and Chennai India Applying a systems approach to concrete environmental issues this volume is geared toward scientists engineers and sustainable development scholars and practitioners who are attuned to the ideas of the Resilience Alliance an international group of scientists who take a more holistic view of ecology and environmental problem solving Chapters cover the origins and rebirth of the ecosystem approach in ecology the bridging of science and values the challenge of governance in complex systems systemic and participatory approaches to management and the place for cultural diversity in the quest for global sustainability **The Routledge Handbook of Research Methods for Social-Ecological Systems** Reinette Biggs, Alta de Vos, Rika Preiser, Hayley Clements, Kristine Maciejewski, Maja Schlüter, 2021-07-29 The Routledge Handbook of Research Methods for Social Ecological Systems provides a synthetic guide to the range of methods that can be employed in social ecological systems SES research The book is primarily targeted at graduate students lecturers and researchers working on SES and has been written in a style that is accessible to readers entering the field from a variety of different disciplinary backgrounds Each chapter

Social-Ecological Resilience and Law Ahjond S. Garmestani, Craig R. Allen, 2014-02-25 Environmental law envisions ecological systems as existing in an equilibrium state or a balance of nature reinforcing a rigid legal framework unable to absorb rapid environmental changes and innovations in sustainability For the past three decades resilience theory which embraces uncertainty and nonlinear dynamics in complex adaptive systems has shown itself to be a robust and invaluable basis for sound environmental management Reforming American law to account for this knowledge is key to transitioning to sustainability This volume features top legal and resilience scholars speaking on resilience theory and its legal applications to climate change biodiversity national parks and water law

Navigating Social-Ecological Systems Fikret Berkes,Johan Colding,Carl Folke,2008-04-24 In the effort towards sustainability it has become increasingly important to develop conceptual frames to understand the dynamics of social and ecological systems Drawing on complex systems theory this book investigates how human societies deal with change in linked social ecological systems and build capacity to adapt to change The concept of resilience is central in this context Resilient social ecological systems have the potential to sustain development by responding to and shaping change in a manner that does not lead to loss of future options Resilient systems also provide capacity for renewal and innovation in the face of rapid transformation and crisis The term navigating in the title is meant to capture this dynamic process Case studies and examples from several geographic areas cultures and resource types are included merging forefront research from natural sciences social sciences and the humanities into a common framework for new insights on sustainability

Social-Ecological Transformation Karl Bruckmeier,2016-06-03 This book advances a social ecological theory to reconnect nature and society through sustainable transformation of interacting social and ecological systems Social ecology develops as an interdisciplinary science by using knowledge from the social sciences especially sociology and economics and from natural scientific ecology Knowledge integration across the boundaries of social and natural sciences is not widespread blocked by the specialisation of theories and their competing forms of explanation and interpretation Chapters in this book describe a new social ecological theory that connects concepts and theories from both sides to create a new interdisciplinary theory Inter and transdisciplinary knowledge synthesis creates possibilities to analyse global environmental problems more systematically by integrating specialized research on environmental problems The author uses social ecological theory to analyse and explain problems and processes of global change in modern society such as climate change and adaptation to it ecosystem change and transformation of the industrial energy regime finally offering pathways of transformation to a future sustainable society

A New Ecology Soeren Nors Nielsen,Brian D. Fath,Simone Bastianoni,Joao C. Marques,Felix Muller,Bernard D. Patten,Robert E. Adapting Institutions Emily Boyd, Carl Folke, 2011-10-27 Global environmental change is occurring at a rate faster than humans have ever experienced Climate change and the loss of ecosystem services are the two main global environmental crises facing us today As a result there is a need for better understanding of the specific and general resilience of networked ecosystems cities organisations and institutions to cope with change In this book an international team of experts provide cutting edge insights into building the resilience and adaptive governance of complex social ecological systems Through a set of case studies it focuses on the social science dimension of ecosystem management in the

context of global change in a move to bridge existing gaps between resilience sustainability and social science Using empirical examples ranging from local to global levels views from a variety of disciplines are integrated to provide an essential resource for scholars policy makers and students seeking innovative approaches to governance The Natural Environment and the Biogeochemical Cycles, 2013-11-11 Environmental Chemistry is a relatively young science lotTest in this subject however is growing very rapidly and although no agreement has been reached as yet about the exact content and limits of this interdisciplinary discipline there appears to be increasing interest in seeing environmental topics which are based on chemistry embodied in this subject One of the first objectives of Environmental Chemistry must be the study of the environment and of natural chemical processes which occur in the environment A major purpose of this series on Environmental Chemistry therefore is to present a reasonably uniform view of various aspects of the chemistry of the environment and chemical reactions occurring in the environment The industrial activities of man have given a new dimension to Environmental Chemistry We have now synthesized and described over five million chemical compounds and chemical industry produces about hundred and fifty million tons of synthetic chemicals annually We ship billions of tons of oil per year and through mining operations and other geophysical modifications large quantities of inorganic and organic materials are released from their natural deposits Cities and metropolitan areas of up to 15 million inhabitants produce large quantities of waste in relatively small and confined areas Much of the chemical products and waste products of modern society are released into the environment either during production storage transport use or ultimate disposal These released materials participate in natural cycles and reactions and frequently lead to interference and disturbance of natural systems
