## **The Big Questions:**

**The Big Questions** Steven E. Landsburg, 2009-11-03 In the wake of his enormously popular books *The Armchair Economist* and *More Sex Is Safer Sex* Steven Landsburg uses concepts from mathematics, economics, and physics to address the big questions in philosophy. What is real? What can we know? What is the difference between right and wrong? And how should we live? Widely renowned for his lively explorations of economics in his fourth book, Landsburg branches out into mathematics and physics as well. Disciplines that like economics the author loves for their beauty, their logical clarity, and their profound and indisputable truth, take us on a provocative and utterly entertaining journey through the questions that have preoccupied philosophers through the ages. The author begins with the broadest possible categories: Reality and Unreality; Knowledge and Belief; Right and Wrong; and then focuses his exploration on specific concerns from a mathematical analysis of the arguments for the existence of God to the real meaning of the Heisenberg Uncertainty Principle and the Gödel Incompleteness Theorem to the moral choices we face in the marketplace and the voting booth. Stimulating, illuminating, and always surprising, *The Big Questions* challenges readers to re-evaluate their most fundamental beliefs and reveals the relationship between the loftiest philosophical quests and our everyday lives.

**The Big Questions: Physics** Michael Brooks, 2012-01-05 The *Big Questions* series is designed to let renowned experts address the 20 most fundamental and frequently asked questions of a major branch of science or philosophy. Each 3000-word essay simply and concisely examines a question that has eternally perplexed enquiring minds and provides answers from history's great thinkers. This ambitious project is a unique distillation of humanity's best ideas.

**The "Big Questions" of Life** Eric Tegelberg, 2022-07-27 This book is an investigation into one man's look into the greatest questions of life. It begins with the idea of how we can know if there is a God. If there is a God, then several of the next big questions will be answered by what that God is like and how He has disclosed himself to humanity.

**The Big Questions in Science and Religion** Keith Ward, 2008-05 Can religious beliefs survive in the scientific age? Are they resoundingly outdated? Or is there something in them of great importance, even if the way they are expressed will have to change given new scientific context? These questions are among those at the core of the science religion dialogue. An Anglican priest who was once an atheist offers compelling insights into the often contentious relationship between diverse religious views and new scientific knowledge. He identifies ten basic questions about the nature of the universe and human life. Among these are: Does the universe have a goal or purpose? Do the laws of nature exclude miracles? Can science provide a wholly naturalistic explanation for moral and religious beliefs? Has science made belief in God obsolete? Are there any good science-based arguments for God? Ward considers concepts from Buddhism, Confucianism, Taoism, Islam, Hinduism, Judaism, and Christianity, while featuring the speculations of cosmologists, physicians, mathematicians, and philosophers.
