Implementation Issues in Integrated Vehicle Electronics* John H. Hall,2005 This major research study provides a fresh critical  
look at the way automobile electronics are and should be built Written by Silicon Valley pioneer John Hall this book is based  
on his nearly 40 years of experience in developing and producing semiconductors for the automobile industry and other  
customers Highly readable and comprehensible for even beginning students of electronics and semiconductor design this  
volume provides an in depth explanation of the factors to be considered when building vehicle systems Starting with a  
concise history of vehicle electronics Hall walks the reader through the environmental conditions faced by these systems and  
the variety of failure mechanisms that can occur Basic and advanced semiconductor issues raised by vehicle implementation  
are then discussed in detail A wide range of issues confronting designers from over marketing of risky features to time and  
cost constraints are explained Complex electronic modules from many different manufacturers are examined and discussed  
as real world case studies of good and bad design techniques Hall concludes by providing design recommendations that will  
allow vehicle electronics system developers to build much tougher devices at little or no incremental production cost This  
book is the first major work to focus on key issues emerging as major causes of safety and performance problems Vehicle  
makers increasingly seek market advantages by providing ever more capable electronics in their products While these  
features add much value to vehicles they fail in ways that are beyond the experience and comprehension of most technicians  
and accident investigators By combining decades of design experience and innovation with extensive research Hall has  
produced unique insights and explanations so engineers can prevent most or perhaps all of these problems John Hall is one  
of Silicon Valley s most prolific independent pioneers and inventors He founded Union Carbide s semi conductor operation in  
1962 He is a founder of Interstil and Micro Power Systems He is the inventor of the first electronic watch first LCD digital  
watch first CMOS liquid crystal display hand held calculator color autofocus cameras among many successful commercial  
products He has worked for many American and foreign automakers on specific projects such as integrated two way radios  
and seat belt interlocks He is working with DoD on hardening electronics systems against non nuclear events
