Scientific Inquiry Cycle: Review

Science based on the scientific method for solving problems and investigating theories. When faced with a new problem, such as a new species or a new element, using research to discover or investigate solutions can help a scientist figure out what is causing the problem fully, including its causes and effects, in the form of a flowchart or flow diagram.

Designing a solution is a process of combining various components, such as design, time and safety. Therefore, determining this part of a science inquiry, science, experiments, and the experiment to help others understand. For example, choosing resources for a project that may affect its cost and time of use, which influences the effectiveness of the solution.

After investigating a problem, investigating their results, what conditions affected it, and any conditions that may have been present, and possible mistakes or new ideas. Communication, sharing findings clearly, and reflecting on the importance of the information presented clearly. This process can help a scientist better understand scientific research, making their communication easier.

10. Mark the best answer for each question.

- What is the first important step when designing a new science experiment?
- Designing a solution immediately
- Ignoring the new problem
- Observing safety constraints
- Understanding the problem fully

- What does investigating a problem help with?
- Ignoring the problem on the scientist
- Understanding the problem and safety
- Ignoring how to solve
- Understanding the problem fully

- What is an example of a problem?
- Building a house
- Learning a new language
- The first meeting with a new person
- Using unsafe equipment

- Why is it important to ignore a problem?
- It is not important
- To have ideas
- To make the problem
- To avoid thinking
