The Book on Testing Alex Rodov, 2023-03-17 More than ever we depend on software to get through our everyday lives It's embedded in our smartphones cars children's toys and household appliances even our toasters and it's transforming our world This brave new world of technology offers exciting opportunities but it has never been more important that we recognize and understand the risks to our security and safety When software goes bad the consequences can range from the farcical such as the HealthCare.gov fiasco in which a highly touted government website crashed almost immediately upon being launched to the tragic as in the case of the Arizona woman who was killed by a self driving car that didn't recognize her as a pedestrian Testing is our line of defence against these software related catastrophes Yet for years it was seen as an afterthought a chore that developers only carried out because they had to and which they tried to complete as cheaply and quickly as possible In The Book on Testing Alex Rodov leads the reader on a personal and informal tour of the software testing landscape focusing on what happens when it isn't done properly In easy to understand language he offers real life examples as well as insights gained from decades of experience to demonstrate why it doesn't have to be that way Testing is difficult and can never be perfect But if it's done well we'll all be able to sleep better at night

Unsettled Topics on the Use of IVHM in the Active Control Loop Rhonda Walther, 2020-07-01 The growth in global economies has led to a world that has become much more mobile in the last few decades The number of enplanements has increased and is expected to continue to do so at an annual average rate of 1.8% through 2039. Prior to the COVID-19 pandemic the number of aircraft in service was expected to increase annually to meet the travel demand Next generation more complex aircraft were scheduled to replace the older aircraft at a pace that still allowed sufficient capacity to meet the increasing demand The events of 2020 have driven the industry to accelerate retirement of older aircraft while deferring the introduction of new aircraft While the length of the industry recovery period cannot be predicted most analysts believe that demand for travel will return once a vaccine is widely available The impact to the design of next generation aircraft will likely be shaped by technologies that are being accelerated for the post COVID world as well as for new mobility platforms Technologies such as artificial intelligence and fault tolerant and self adapting control will use integrated vehicle health management (IVHM) capabilities as part of the decision making processes This SAE EDGE Research Report seeks to explore the unsettled issues surrounding embedding IVHM information into the active control loops of modern aircraft systems and in future generations of aircraft designs NOTE SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still

unsettled technologies of interest to the mobility industry The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues SAE EDGE Research Reports are not intended to resolve the challenges they identify or close any topic to further scrutiny Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2020011> *Safety and Security of Cyber-Physical Systems* Frank J.
