**Technology Development for Army Unmanned Ground Vehicles** National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Army Unmanned Ground Vehicle Technology, 2003-02-01 Unmanned ground vehicles UGV are expected to play a key role in the Army's Objective Force structure. These UGVs would be used for weapons platforms, logistics carriers, and reconnaissance, surveillance, and target acquisition among other things. To examine aspects of the Army's UGV program, assess technology readiness, and identify key issues in implementing UGV systems among other questions, the Deputy Assistant Secretary of the Army for Research and Technology asked the National Research Council (NRC) to conduct a study of UGV technologies. This report discusses UGV operational requirements, current development efforts, and technology integration and roadmaps to the future. Key recommendations are presented, addressing technical content, time lines, and milestones for the UGV efforts. **Unmanned Ground Vehicle Technology**, 2005 **Books In Print 2004-2005** Ed Bowker, Staff, Staff Bowker, Ed, 2004 **Army Support to Future Combat Systems Unmanned Ground Vehicles**, 2007 Army support to FCS UGV's future combat systems, unmanned ground vehicles, 1. unmanned systems concept of operations in the future force, 2. technology challenges to achieve FCS end state, 3. priorities driving S/T investment, 4. bridging the gap between current and desired performance capabilities, 5. joint center unmanned ground vehicles, JC UGV for development and transition of robotic ground vehicle technologies. **Reverse Acronyms, Initialisms, & Abbreviations Dictionary**, 2009 **Autonomy, Unmanned Ground Vehicles, and the U.S. Army** GREGORY J. NARDI, 2025-05-22 As a result of technological maturation, Congressional mandate, and battlefield use, the U.S. Army is currently involved in a tremendous amount of activity surrounding the development of unmanned systems (UMS). While current systems require near-constant supervision, the research and development community is developing capabilities that will greatly increase the autonomy of future UMS. The payoff of employing highly autonomous unmanned ground vehicles (UGV) for the Army is potentially high in a number of areas. However, the second- or third-order effects could have negative consequences. This monograph analyzes current U.S. Army activities surrounding the development of autonomous UGVs in order to provide ideas for developers to better attain success and help prevent unintended consequences. Using lessons from the past and theories for innovation, leaders can gain insight for the conduct of current development. The progress of technology has often been faster than our doctrine and policy development. As challenging as the time, money, and manpower might be to focus on autonomous UGV issues, the potential benefits of autonomy to our Soldiers are too great not to make the investment.
