*Hidden Histories of the Dead* Elizabeth T. Hurren, 2021-02-25 In this discipline redefining book Elizabeth T Hurren maps the post mortem journeys of bodies body parts organs and brains inside the secretive culture of modern British medical research after WWII as the bodies of the deceased were harvested as bio commons Often the human stories behind these bodies were dissected discarded or destroyed in death Hidden Histories of the Dead recovers human faces and supply lines in the archives that medical science neglected to acknowledge It investigates the medical ethics of organ donation the legal ambiguities of a lack of fully informed consent and the shifting boundaries of life and re defining of medical death in a biotechnological era Hurren reveals the implicit explicit and missed body disputes that took second place to the economics of the national and international commodification of human material in global medical sciences of the Genome era This title is also available as Open Access

**Being a Human** Charles Foster, 2021-08-26 A SPECTATOR BOOK OF THE YEAR 2022 A thrilling deep dive through our evolutionary past and a witty and learned commentary on why we are the way we are and what wisdom we ve lost along the way Cal Flynn author of Islands of Abandonment A wild ride brave outrageous hilarious helpful and urgent essential reading Merlin Sheldrake author of Entangled Lives What kind of creature is a human If we don t know what we are how can we know how to act Charles Foster sets out to understand what a human is inhabiting the sensory worlds of humans at three pivotal moments in our history Foster begins his quest with his son in a Derbyshire wood trying to find a way of experiencing the world that recognises the deep expanse of time when we understood ourselves as hunter gatherers and when modern consciousness was first ignited From there he travels to the Neolithic a way of being defined by fences farms sky gods and slaughterhouses and finally to the Enlightenment when we decided that the universe was a machine and we were soulless cogs within it

**Control of Dead-time Processes** Julio E. Normey-Rico, 2007-06-07 This text introduces the fundamental techniques for controlling dead time processes from simple monovariable to complex multivariable cases Dead time process control problems are studied using classical proportional integral differential PID control for the simpler examples and dead time compensator DTC and model predictive control MPC methods for progressively more complex ones Downloadable MATLAB code makes the examples and ideas more convenient and simpler

**Adaptive Systems in Control and Signal Processing 1983** I. D. Landau, M. Tomizuka, D. M. Auslander, 2014-06-28 Adaptive Systems in Control and Signal Processing 1983 is a compendium of papers presented at the International Federation of Automatic Control in San Francisco on June 20 22 1983 One paper addresses the results through comparative alternative algorithms in adaptive control of linear time invariant and time varying systems Another paper presents a method in computer simulation of a wide range of stable plants to achieve an alternative approach in designing an adaptive control system The book also compares the stability and the sensitivity approach involving the design of model reference adaptive systems The authors involved explain that the sensitivity concept determines the dynamic speed of adaptation while the

stability concept focuses on finding a linear compensator for any deviant signal One paper proposes an indirect adaptive control algorithm for MIMO square full rank minimum phase systems while another paper discusses the application of the discrete time multivariable adaptive control system to non minimum phase plants with an unknown dead time This book can prove valuable to engineers and researchers of electrical computer and mechanical engineering It can also be helpful for technicians and students dealing with automatic control and telecontrol     *Combinatorial Algorithms on Words* Alberto Apostolico,Zvi Galil,2013-06-29 Combinatorial Algorithms on Words refers to the collection of manipulations of strings of symbols words not necessarily from a finite alphabet that exploit the combinatorial properties of the logical physical input arrangement to achieve efficient computational performances The model of computation may be any of the established serial paradigms e g RAM s Turing Machines or one of the emerging parallel models e g PRAM WRAM Systolic Arrays CCC This book focuses on some of the accomplishments of recent years in such disparate areas as pattern matching data compression free groups coding theory parallel and VLSI computation and symbolic dynamics these share a common flavor yet have not been examined together in the past In addition to being theoretically interesting these studies have had significant applications It happens that these works have all too frequently been carried out in isolation with contributions addressing similar issues scattered throughout a rather diverse body of literature We felt that it would be advantageous to both current and future researchers to collect this work in a single reference It should be clear that the book's emphasis is on aspects of combinatorics and complexity rather than logic foundations and decidability In view of the large body of research and the degree of unity already achieved by studies in the theory of automata and formal languages we have allocated very little space to them     European Control Conference 1995 ,1995-09-05 Proceedings of the European Control Conference 1995 Rome Italy 5 8 September 1995     *The Silent Rhetoric of the Body* Matthew Craske,2007 Matthew Craske looks closely at tomb sculptures in their social context He discusses a large number of monuments by many different sculptors all with a knowledge of the person commemorated and the circumstances behind the commission

**Electromagnetic Transients of Power Electronics Systems** Zhengming Zhao,Liqiang Yuan,Hua Bai,Ting Lu,2019-02-20 This book discusses topics related to power electronics especially electromagnetic transient analysis and control of high power electronics conversion It focuses on the re evaluation of power electronics transient analysis and modeling device based system safe operating area and energy balance based control methods and presenting for the first time numerous experimental results for the transient process of various real world converters The book systematically presents both theoretical analysis and practical applications The first chapter discusses the structure and attributes of power electronics systems highlighting the analysis and synthesis while the second chapter explores the transient process and modeling for power electronics systems The transient features of power devices at switching on off transient conversion circuit with stray parameters and device based system safe operating area are described in the subsequent three chapters The book also examines the measurement of transient processes

electromagnetic pulses and their series as well as high performance closed loop control and expounds the basic principles and method of the energy balanced control strategy Lastly it introduces the applications of transient analysis of typical power electronics systems The book is valuable as a textbook for college students and as a reference resource for electrical engineers as well as anyone working in the field of high power electronics system
