Stebbins,2015-09-16

We live in an information saturated environment and spend far too much time searching surfing skimming contributing and organizing the information in our lives We spend too little time immersing ourselves in reliable high quality information We are often so buried in information and strapped for time that we grab information like it was fast food without bothering to evaluate its quality Finding Reliable Information Online Adventures of an Information Sleuth uses stories or information adventures to illustrate the best approaches to searching for information and to help us develop our aptitude for locating high quality resources in a rapidly changing digital environment that is becoming proficient at monopolizing our attention with useless or unreliable information This book is about taking charge of the search process and not handing over the reins to search engines like Google Bing or Yahoo to dictate what information we consume Each chapter focuses on a quest for different types of information while digging deeper into the complexities of finding credible places to look for information and ways to think about evaluating it As the Internet evolves and becomes more sophisticated our strategies for finding and evaluating information need to evolve as well The stories in this book range from investigating challenging research questions to exploring health issues and everyday life questions like finding a reliable restaurant or product review These chapters go beyond the simple and more mechanical checklist approach to evaluating information though these factors are also discussed **The Great Search** John Philip Newell,2024-08-20

s a competitor of the Deep Blue team I had mixed emotions as I A watched their chess playing

machine defeat World Chess Champion Garry Kasparov during their 1997 Rematch. On the one hand it meant that our MIT program Socrates would not be the first program to defeat a human World Chess Champion. On the other hand I felt great admiration for the monumental engineering accomplishment that Deep Blue's victory represented and proud for the small part that my own team had played in advancing computer chess research. After over 50 years of concerted effort to produce a chess playing machine capable of beating the best human Deep Blue finally attained the goal that so many computer scientists had sought. In this entertaining and informative book Monty Newborn chronicles the story of Deep Blue from its origins as a prototype at Carnegie Mellon University to its winning the Rematch as a top IBM research project. You do not have to be a chess player or a computer scientist to enjoy this marvelous tale of man and machine. Monty paints the characters of this drama in vivid colors from the technical geniuses CB Hsu Murray Campbell and Thomas Anantharaman to the visionary manager CJ Tan. As only an insider can, Monty recreates the excitement of the event including the IBM marketing hype and the marvelous compendium of editorial cartoons. *Research and Advanced Technology for Digital Libraries* Jaap Kamps, Giannis Tsakonas, Yannis Manolopoulos, Lazaros Iliadis, Ioannis Karydis, 2017-09-04. The best decisions made by public managers are based not on instinct but on an informed understanding of what's happening on the ground. Policy may be directed by ideology but it must also be founded on reality.

The challenge of making the right decisions as a public manager is often therefore based on the need for rigorous actionable research. Now in a thoughtfully revised second edition this textbook shows students of Public Administration exactly how to use both qualitative and quantitative research techniques to give them the best chance to make the right decisions. Uniquely Eller, Gerber and Robinson present research methodologies through a series of real life case studies with each chapter exploring situations where a public manager can use research to answer specific questions demonstrating how that research can inform future policy. Taking readers through the key concepts from research design and sampling to interviews, survey data and more statistical based approaches this new edition provides a complete guide to using research in the public and voluntary sectors. New to this edition To better orient the student the second edition is thematically arranged. Five sections each with a short essay provide not only previews of the content of each section but more importantly guide the reader through how the concepts and techniques covered relate to real world use and application. A new chapter on applied quantitative analyses has been added to offer coverage of several commonly used and valuable analytic techniques for decision making for policy and management benefit, cost analysis, risk assessment and forecasting. The second edition is accompanied by online materials containing suggested course plans and sample syllabi, PowerPoint lecture slides and student support materials to illustrate the application of key concepts and analytic techniques. Each chapter also includes discussion questions, class exercises, end of chapter review questions and key vocabulary to provide students with a range of further tools to apply research principles to practical situations.
