Social Measurement Current Issues:

Approaches to Measuring Human Behavior in the Social Environment William R. Nugent, 2005 This is a state of the art examination of various approaches to measuring and assessing client functioning and specific aspects of clients social environments. It discusses numerous age groups and ethnic populations and makes use of cutting edge methodologies in its examinations of measuring depression in children, measuring the neighborhood from a child's perspective, measuring and assessing family functioning, measuring spirituality, and measuring psychosocial problems in seriously mentally ill families. Helpful tables in each chapter make complex information easy to access and understand. **Approaches to Measuring Human Behavior in the Social Environment** is vital reading for social workers, psychologists, counselors, marriage and family therapists, psychiatrists, and researchers in these fields.

Handbook of Research Design and Social Measurement Delbert C. Miller, Neil J. Salkind, 2002-01-16 If a student researcher had only one handbook on their bookshelf, Miller and Salkind's **Handbook** would certainly have to be it. With the updated material, the addition of the section on ethical issues, which is so well done that I'm recommending it to the departmental representative to the university IRB and a new Part 4 on Qualitative Methods, the new **Handbook** is an indispensable resource for researchers. Dan Cover, Department of Sociology, Furman University. I have observed that most instructors want to teach methodology their way to imbue the course with their own approach. Miller and Salkind allows one to do this easily. The book is both conceptually strong e.g. very good coverage of epistemology, research design and statistics, and at the same time provides a wealth of practical knowledge, scales, indices, professional organizations, computer applications, etc. In addition, it covers the waterfront of methodology. Michael L. Vasu, Director of Information Technology, North Carolina State University. A unique and excellent reference tool for all social science researchers and a good textbook for graduate students and senior year undergraduate classes. These students are about to enter the real life of research and need a handy and comprehensive tool as a starting point that offers shortcuts for getting into real research projects. For a small project, the book offers enough information to get the project started. For big projects, the book is ideal for information on where to look for things and examples. Jianhong Liu, Department of Sociology, Rhode Island College. The book considered a necessity by many social science researchers and their students has been revised and updated while retaining the features that made it so useful. The emphasis in this new edition is on the tools graduate students and more advanced researchers need to conduct high quality research. Features: Benefits: Provides step by step instruction for students research training by beginning with how to find a creative idea, a middle range theory and initial hypothesis and proceeds through design, proposal, collection and analysis of data followed by writing, reporting and publication. Section on scales and indices are organized so that readers can quickly locate and find the type of scale or index in which they may be interested. All sections are now followed by useful and well considered reference sections so that readers can read more about each topic. Includes updated coverage on new scales, internal and external validity and new

analytic techniques with extensive references on each. Presents extensive coverage of how to prepare manuscripts for publication including a list of all journals covered by Sociological Abstracts along with the editorial office address and URL for each entry. Discusses the importance of policy research with presentation and discussion of specific models as an adjunct to both applied and basic research techniques. Provides extensive coverage of funding opportunities including those offered by the National Institutes of Health the National Science Foundation and a directory of private funding sources including relevant contact information. New to this edition New Part 4 by John Creswell and Ray Maietta provides a comprehensive introduction to qualitative methods including a review of existing computer applications for collecting and analyzing data. New and more current reviews and commentaries have replaced dated or no longer relevant excerpts. Thousands of new references on the assessment of important sociological variables as well as references to such topics as statistical analysis computer applications and specific topics. Thoroughly updated information on the use of computers and online research techniques including beginning and intermediate material about the Internet and its use by the modern research scientist. Coherent and thoughtful review of the most popular statistical analysis software packages. New guidelines and discussion of ethical practices in social and behavioral science research including extensive coverage of institutional review board procedures and activities. Expansion of social indicators to include international coverage. Plus there is an extensive and well organized table of contents with four levels of headings and for the first time in the history of the book a comprehensive index.

COVID-19 and Existential Positive Psychology (PP2.0): The New Science of Self-Transcendence Paul T. P. Wong, Claude-Hélène Mayer, Gökmen Arslan, In the era of COVID 19 many people have suffered high levels of stress and mental health problems. To cope with the widespread of suffering physical psychological social and economical the positive psychology of personal happiness is no longer the sole approach to examine personal wellbeing. Other approaches such as Viktor Frankl's theory of self transcendence provide a promising framework for research and intervention on how to achieve resilience wellbeing and happiness through overcoming suffering and self transcendence. The existential positive psychology of suffering complements the positive psychology of happiness which is championed by Martin Seligman as two equal halves of the circle of wellbeing and optimal mental health. This Research Topic aims to examine the different approaches to Positive Psychology and their influence on individual wellbeing during the COVID 19 era.

One of the exciting developments in the positive psychology of wellbeing is the mounting research on the adaptive benefits of negative emotions such as shame, guilt, and anger as well as the dialectical process of balancing negative and positive emotions. As an example, based on all the empirical research and Frankl's self-transcendence model, Wong has developed the existential positive psychology of suffering (PP2.0) as the foundation for flourishing. Here are a few main tenets of PP2.0: 1. Life is suffering and a constant struggle throughout every stage of development. 2. The search for self-transcendence is a primary motive guided by the meaning mindset and mindful mindset. 3. Wellbeing cannot be sustainable without overcoming and transforming suffering. In this Research Topic, we welcome diverse approaches discussing the following points: The dialectic process of overcoming the challenges of every stage of development as necessary for personal growth and self-transcendence; The role of self-transcendence in resilience, virtue, meaning, and happiness; The upside of negative emotions; The new science of resilience based on cultivating the resilient mindset and character; How to make the best use of suffering to achieve our potentials; mental health.

Goal Attainment Scaling Thomas J. Kiresuk, Aaron Smith, Joseph E. Cardillo, 2014-02-25

There is an extensive literature on Goal Attainment Scaling (GAS) but the publications are widely scattered and often inaccessible, covering several foreign countries and many professional disciplines and fields of application. This book provides both a user manual and a complete reference work on GAS, including a comprehensive account of what the method is, what its strengths and limitations are, how it can be used, and what it can offer. The book is designed to be of interest to service providers, program directors, and administrators, service and business organizations, program evaluators, researchers, and students in a variety of fields. No previous account of GAS has provided an up-to-date, comprehensive description and explanation of the technique. The chapters include a basic 'how to do it' handbook, step-by-step implementation instructions, frequently occurring problems, and what should be done about them; methods for monitoring the quality of the goal setting process, and a discussion of policy and administration issues. There are many illustrations from actual applications, including examples of goals scaled for the individual, the specific program, the agency, or the total system. Procedures for training and estimates of training costs are also provided.
