In particular, it shows how Einstein's misgivings about quantum mechanics boil down to his persistence in defending the principle of contiguity at the root of the modern cosmology and in relation to neo cybernetics the book rediscovers Ashby's theory of adaptive behaviour enabling a new synthesis between physiology, psychology and ethology that has implications for systems practice. Furthermore this new cosmology comes with a new anthropology that informs utopics the science of utopic systems and sheds new light on the actual founding fathers of the domain of human science. In particular the book provides an understanding of how our human world works and how it is being constituted by utopic systems that look into the future to realize something possible. Finally it points the way to the future unification of knowledge bringing together systems philosophy and systems science given that world hypothesis is what makes logically possible the development and consolidation of all the different domains of science *A History of Social Thought* Rabindra Nath Mukherjee, 1964 **Social Thought from Lore to Science** Howard Becker, Harry Elmer Barnes, 1961
