

Developments in South and Southeast Asia

*What the books taught me, I've practised,
What they didn't teach me, I've taught myself.
I've gone into the forest and wrestled with the firm,
I didn't get this far by teaching one thing and doing another.*

— Lal Ded (1170–1382)

Essential Question: How did various beliefs and practices in South and Southeast Asia affect society and the development of states?

The poetry of Lal Ded, known as Mother Lalit, illustrates a major cross-interaction between religious traditions that shaped the history of South and Southern Asia. She was born in Kashmir, a region of northern India. While a Hindu, her emphasis on experience appealed to many Muslims, particularly Sufis. The interaction of Hindus and Muslims, though sometimes violent, created dynamic developments in religious thought, politics, economics, art, and architecture. Despite the strong Islamic presence in the region, local Hindu kingdoms continued to play a major role in India's decentralized political landscape. A third religion, Buddhism, also had a strong presence in the area, particularly in the Sinhalese dynasties in present-day Sri Lanka and the great kingdoms of Southeast Asia.

Political Structures in South Asia

South Asia was only occasionally united as a single state in its history. After the Gupta Dynasty that had dominated South Asia collapsed in 550, ending the so-called Golden Age or Classical Era of Indian history, disunity returned to the region for most of the next 1,000 years. Northern and southern India developed separate political structures. However, Hinduism provided some cultural unity throughout the region. Many people combined their own local faith tradition with adherence to the same scriptures and core beliefs respected throughout the region.

Political Structures in Southern India: Southern India was more stable than northern India. The first kingdom, the Chola Dynasty, reigned over southern India for more than 400 years (850–1267). During the 11th century,

Centering Humanism in STEM Education Bryan Dewsbury,Susannah McGowan,Sheila S. Jaswal ,Desiree Forsythe,2024-09-24 Research demonstrates that STEM disciplines perpetuate a history of exclusion particularly for students with marginalized identities This poses problems particularly when science permeates every aspect of contemporary American life Institutions repeated failures to disrupt systemic oppression in STEM has led to a mostly white cisgender and male scientific workforce replete with implicit and or explicit biases Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom Maintaining views on science as inherently objective isolates it from the world in which it is performed STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students social and educational capital We must create a STEM environment in which students with marginalized identities feel respected listened to and valued We must assist students in understanding how their positionality privilege and power both historically and currently impacts their meaning making and understanding of STEM
