Laboratory Protocols in Applied Life Sciences Prakash Singh Bisen, 2014-02-26 As applied life science progresses, becoming fully integrated into the biological, chemical and engineering sciences, there is a growing need for expanding life sciences research techniques. Anticipating the demands of various life science disciplines, **Laboratory Protocols in Applied Life Sciences** explores this development. This book covers a wide spectrum of areas in the interdisciplinary fields of life sciences, pharmacy, medical and paramedical sciences and biotechnology. It examines the principles, concepts and every aspect of applicable techniques in these areas. Covering elementary concepts to advanced research techniques, the text analyzes data through experimentation and explains the theory behind each exercise. It presents each experiment with an introduction to the topic, concise objectives and a list of necessary materials and reagents, and introduces step by step, readily feasible laboratory protocols. Focusing on the chemical characteristics of enzymes, metabolic processes, product and raw materials, and on the basic mechanisms and analytical techniques involved in life science technological transformations, this text provides information on the biological characteristics of living cells of different origin and the development of new life forms by genetic engineering techniques. It also examines product development using biological systems, including pharmaceutical, food and beverage industries. **Laboratory Protocols in Applied Life Sciences** presents a nonmathematical account of the underlying principles of a variety of experimental techniques in disciplines including Biotechnology, Analytical biochemistry, Clinical biochemistry, Biophysics, Molecular biology, Genetic engineering, Bioprocess technology, Industrial processes, Animal, Plant, Microbial biology, Computational biology, Biosensors. Each chapter is self-contained and written in a style that helps students progress from basic to advanced techniques and eventually design and execute their own experiments in a given field of biology.
