

## Chemistry 2<sup>nd</sup> Semester Final Exam Review

### Chemical Bonds

- Give a physical description of how the atoms and molecules are arranged in solids, liquids, and gases.  
*A: In a liquid, the forces between the molecules are weak, so the molecules are free to move around. In a solid the forces between the molecules (intermolecular forces) are stronger so they are held in place.*
- Use the information from the previous question to describe the shape and volume for each phase (state) of matter.  
*A: Solids have a repeating geometric pattern (lattice structure) in which the particles vibrate in place. They have a definite shape and a definite volume.  
Particles within a liquid slide past each and are close, but are not held in place. They have a definite volume, but no definite shape.  
Gases particles move chaotically bouncing off one another. They have neither a definite shape nor a definite volume.*
- List the three phases of matter in order of increasing intermolecular attractions.  
*A: Gas, liquid, solid.*
- Why do the atoms and molecules in liquids move in a random pattern relative to one another instead of being in a solid form?  
*A: Their kinetic energy (temperature) is high enough to overcome the attractive forces that might otherwise hold them in a repeating pattern. The attractive forces aren't strong enough to hold them together at that temperature.*

### Conservation of Matter and Stoichiometry

- The atomic mass unit and the mole are defined using what isotope?  
*A: Carbon-12*
- Balance the following equations:
  - $\text{Al}_2\text{O}_3 + \text{Cl}_2 + \text{C} \rightarrow \text{AlCl}_3 + \text{CO}$   
*A:  $\text{Al}_2\text{O}_3 + 3\text{Cl}_2 + 3\text{C} \rightarrow 2\text{AlCl}_3 + 3\text{CO}$*
  - $\text{C}_2\text{H}_6 + \text{O}_2 \rightarrow \text{CO}_2 + \text{H}_2\text{O}$   
*A:  $2\text{C}_2\text{H}_6 + 7\text{O}_2 \rightarrow 8\text{ CO}_2 + 6\text{H}_2\text{O}$*
- What isotope is used to define one mole?  
*A: Carbon-12*
- How many particles (atoms or molecules) are in one mole?  
*A:  $6.02 \times 10^{23}$*
- Find the molar mass for the following chemical formulas:
  - $\text{ZnF}_2$   
*A: 103.377 g/mol*
  - $\text{Al}_2(\text{SO}_4)_3$   
*A: 342.151 g/mol*
- How many moles are in 4.37 kg of NaOH?  
*A: 109.3 mol*
- How many atoms are in 2075 g of He?  
*A:  $3.12 \times 10^{26}$  atoms*
- What volume will 92.31 g of CO<sub>2</sub> occupy at STP?  
*A: 46.985 L*
- How many grams of sodium hydroxide are needed to react with 6.23 g of barium bromide?  
$$\text{NaOH} + \text{BaBr}_2 \rightarrow \text{NaBr} + \text{Ba(OH)}_2$$
  
*A: 1.68 g NaOH*
- In the reaction,  $2\text{Mg} + \text{O}_2 \rightarrow 2\text{MgO}$ , if 100.0 g of magnesium reacts with 50.0 g of oxygen, what mass of product is produced?  
*A: 126 g MgO*

### Gases and Their Properties

- What is the kinetic molecular theory (KMT)?  
*A: The Kinetic Molecular Theory is used to explain the behavior of gases and is based upon the following postulates:
  - Gas are composed of a smoky particles that behave like hard spherical objects in a state of constant, random motion.
  - These particles move in a straight line until they collide with another particle or the walls of the container.
  - These particles are much smaller than the distance between particles, therefore the volume of a gas is mostly empty space and the volume of the gas molecule themselves is negligible.
  - There is no force of attraction between gas particles or between the particles and the walls of the container.
  - Collisions between gas particles or collisions with the walls of the container are elastic. That is, none of the energy of the gas particle is lost in a collision.*

## **Nd Semester Final Review Questions:**

*Digital Learning and Teaching in Chemistry* Yehudit Judy Dori, Courtney Ngai, Gabriela Szteinberg, 2023-07-12 Education is always evolving and most recently has shifted to increased online or remote learning. *Digital Learning and Teaching in Chemistry* compiles the established and emerging trends in this field specifically within the context of learning and teaching in chemistry. This book shares insights about five major themes: best practices for teaching and learning digitally, digital learning platforms, virtual visualisation and laboratory to promote learning in science, digital assessment and building communities of learners and educators. The authors are chemistry instructors and researchers from nine countries contributing an international perspective on digital learning and teaching in chemistry. While the chapters in this book span a wide variety of topics as a whole, they focus on using technology and digital platforms as a method for supporting inclusive and meaningful learning. The best practices and recommendations shared by the authors are highly relevant for modern chemistry education as teaching and learning through digital methods is likely to persist. Furthermore, teaching chemistry digitally has the potential to bring greater equity to the field of chemistry education in terms of who has access to quality learning and this book will contribute to that goal. This book will be essential reading for those working in chemical education and teaching. Yehudit Judy Dori is internationally recognised, formerly Dean of the Faculty of Education of Science and Technology at the Technion Israel Institute of Technology and won the 2020 NARST Distinguished Contributions to Science Education through Research Award (DCRA) for her exceptional research contributions. Courtney Ngai and Gabriela Szteinberg are passionate researchers and practitioners in the education field. Courtney Ngai is the Associate Director of the Office of Undergraduate Research and Artistry at Colorado State University. Gabriela Szteinberg serves as Assistant Dean and Academic Coordinator for the College of Arts and Sciences at Washington University in St Louis.

## **Effective Classroom Turnaround**

John Jensen, 2012-08-31 Effective Classroom Turnaround Practice Makes Permanent the third book in the Practices Makes Permanent series contends that because students learn and behave differently educators must thoughtfully approach them in the classroom in order to affect change. Like all humans students respond to conditions around them. Regardless of their habits and behaviors at home or in school educators can successfully stimulate them to approach education in a new more positive light. Effective Classroom Turnaround offers teachers over fifty ways to generate cooperation enthusiasm and consistent academic success by utilizing principles of learning and motivation that are often ignored or at best underused even in the best schools. Embracing the idea that school reform occurs in the classroom and not in the boardroom this guide will effectively connect instruction with students motivation and performance. *The Silver Bullet Easy Learning System*

John Jensen, 2007-12-11 Students can change rapidly. Just entering a different room they may feel happier and more successful because they respond instantly to changed conditions. The same students may be bored and uncooperative and then learn zestfully. The most powerful influence available to teachers is students opinion of each other. Properly applied it inspires them to do better in all ways with results evident in a couple weeks K-12. They're more cooperative supportive gain firm knowledge hourly and are proud of their accomplishments. National legislation ordering schools to change is an unwanted distraction. Teachers instead need methods easy to apply that work quickly and obviously. With seven key elements and fifty four methods this book explains How current instruction insures superficial learning. Easy changes that increase long term mastery. How the axiom Practice makes perfect applies to learning. How to generate pride with hourly success and turn it into a body of knowledge. The absolute fastest way to get mutual support and harmony. How to make learning a team sport that includes everyone. How to solve the national problem of assessing learning objectively. How to discipline without alienating. How students remember the most for the longest time. **Handbook of Demonstrations and Activities in the Teaching of Psychology**
