Office, 2004 **Statistical Challenges in Modern Astronomy II** G. Jogesh Babu, Eric D. Feigelson, 2012-12-06 Modern
astronomical research faces a vast range of statistical issues which have spawned a revival in methodological activity among
astronomers. The Statistical Challenges in Modern Astronomy II conference held in June 1996 at the Pennsylvania State
University five years after the first conference brought astronomers and statisticians together to discuss methodological
issues of common interest. Time series analysis, image analysis, Bayesian methods, Poisson processes, nonlinear regression,
maximum likelihood, multivariate classification, and wavelet and multiscale analyses were important themes. Astronomers
frequently encounter troublesome situations such as heteroscedastic weighting of data, unevenly spaced time series, and
selection effects leading to censoring and truncation. Many problems were introduced at the conference in the context of
large scale astronomical projects including LIGO, AXAF, XTE, Hipparcos, and digitized sky surveys. This volume will be of
interest to researchers and advanced students in both fields, astronomers who seek exposure to recent developments in
statistics and statisticians interested in confronting new problems. It is edited by two faculty members of the Pennsylvania
State University who have a long standing cross disciplinary collaboration and jointly authored the recent introductory
monograph *Astrostatistics*. G. J. Babu is Professor of Statistics, Fellow of the Institute of Mathematical Statistics, and Associate
Editor of the *Journal of Statistical Planning Inference* and the *Journal of Nonparametric Statistics*. Eric D. Feigelson is
Professor of Astronomy and Astrophysics. *Bulletin of the United States Bureau of Labor Statistics*, 1968 Data
Analysis in Astronomy V. di Gesù, L. Scarsi, P. Crane, J.H. Friedman, S. Levialdi, 2012-12-06 The international Workshop on
Data Analysis in Astronomy was intended to give a presentation of experiences that have been acquired in data analysis and
image processing developments and applications that are steadily growing up in Astronomy. The quality and the quantity of
ground and satellite observations require more sophisticated data analysis methods and better computational tools. The
Workshop has reviewed the present state of the art, explored new methods and discussed a wide range of applications. The
topics which have been selected have covered the main fields of interest for data analysis in Astronomy. The Workshop has
been focused on the methods used and their significant applications. Results which gave a major contribution to the physical
interpretation of the data have been stressed in the presentations. Attention has been devoted to the description of
operational system for data analysis in astronomy. The success of the meeting has been the results of the coordinated effort of
several people from the organizers to those who presented a contribution and/or took part in the discussion. We wish to
thank the members of the Workshop scientific committee Prof. M. Capaccioli, Prof. G. De Biase, Prof. G. Sedmak, Prof. A. Zichichi
and of the local organizing committee Dr. R. Buccheri and Dr. M. C. Maccone together with Miss P. Savalli and Dr. A. Gabriele
