**Series Techniques for Economists** Terence C. Mills,1990 The application of time series techniques in economics has become increasingly important both for forecasting purposes and in the empirical analysis of time series in general In this book Terence Mills not only brings together recent research at the frontiers of the subject but also analyses the areas of most importance to applied economics It is an up to date text which extends the basic techniques of analysis to cover the development of methods that can be used to analyse a wide range of economic problems The book analyses three basic areas of time series analysis univariate models multivariate models and non linear models In each case the basic theory is outlined and then extended to cover recent developments Particular emphasis is placed on applications of the theory to important areas of applied economics and on the computer software and programs needed to implement the techniques This book clearly distinguishes itself from its competitors by emphasising the techniques of time series modelling rather than technical aspects such as estimation and by the breadth of the models considered It features many detailed real world examples using a wide range of actual time series It will be useful to econometricians and specialists in forecasting and finance and accessible to most practitioners in economics and the allied professions

## **Handbook on Data Envelopment Analysis**

William W. Cooper,Lawrence M. Seiford,Joe Zhu,2006-04-11 **Data Envelopment Analysis** DEA is a relatively new data oriented approach for evaluating the performances of a set of entities called Decision Making Units DMUs which convert multiple inputs into multiple outputs DEA has been used in evaluating the performances of many different kinds of entities engaged in many different kinds of activities in many different contexts It has opened up possibilities for use in cases which have been resistant to other approaches because of the complex and often unknown nature of the relations between the multiple inputs and outputs involved in many of these activities which are often reported in non commeasurable units DEA has also been used to supply new insights into activities and entities that have previously been evaluated by othermethods This handbook is intended to represent a milestone in the progression of DEA Written by experts who are often major contributors to the topics to be covered it includes a comprehensive review and discussion of basic DEA models extensions to the basic DEA methods and a collection of DEA applications in the areas of banking education sports retail health care and a review of current DEA software technology This handbook s chapters are organized into three categories i basic DEA models concepts and their extensions ii DEA applications and iii xii Preface DEA software packages The first category consists of eleven chapters

**Statistical Foundations for Econometrics** Omar F. Hamouda,J. C. R. Rowley,1997 This is the fifth volume in a ten volume set designed for publication in 1997. It reprints in book form a selection of the most important and influential articles on probability, econometrics and economic games which cumulatively have had a major impact on the development of modern economics. There are 242 articles dating from 1936 to 1996. Many of them were originally published in relatively inaccessible journals and may not therefore be available in the archives of many university libraries

**General-to-specific Modelling** Julia Campos,Neil R. Ericsson,David F. Hendry,2005 Economists have long sought to develop quantitative models of economic behaviour which blend economic theory with data evidence. Econometric modelling of economic time series has strived to achieve this by seeking to discover sustainable and interpretable relationships. This important two volume collection focuses on a central method used in selecting such models namely simplification of an initially general model that adequately characterizes the empirical evidence within the investigators theoretical framework. The volumes feature a wealth of evidence that has accrued over the last five years displaying its excellent abilities for model selection based on Monte Carlo studies of automatic algorithms. These also throw light on several major methodological issues and prompt many new ideas which are discussed. The collection will be valuable to all empirical economists and econometricians
