Statistics In Archaeology:

Statistics for Archaeologists Robert D. Drennan, 2009-08-11 In the decade since its publication the first edition of *Statistics for Archaeologists* has become a staple in the classroom Taking a jargon free approach this teaching tool introduces the basic principles of statistics to archaeologists The author covers the necessary techniques for analyzing data collected in the field and laboratory as well as for evaluating the significance of the relationships between variables In addition chapters discuss the special concerns of working with samples This well illustrated guide features several practice problems making it an ideal text for students in archaeology and anthropology Using feedback from students and teachers who have been using the first edition as well as another ten years of personal experience with the text the author has provided an updated and revised second edition with a number of important changes New topics covered include Proportions and Densities Error Ranges for Medians Resampling Approaches Residuals from Regression Point Sampling Multivariate Analysis Similarity Measures Multidimensional Scaling Principal Components Analysis Cluster Analysis Those already familiar with the clear and useful format of *Statistics for Archaeologists* will find this new edition a welcome update and the new sections will make this seminal textbook an indispensable resource for a whole new group of students professors and practitioners

Statistics in Archaeology Michael Baxter, 2003-09-26 *Statistics in Archaeology* presents the particular statistical methodologies which can be used to address specific issues and problems in archaeology Through in depth case studies the author illustrates how such techniques can be employed in the archaeological context These examples are taken from a wide range of different countries and reflect the international nature of archaeology and its students and practitioners The technical level of the book is intermediate and is for the academic and professional archaeologist needing to know more about the statistical techniques available to them The structure and content of the book mean that it will also appeal to applied statisticians interested in how statistical methods can be used in different application areas

Quantitative Analysis in Archaeology Todd L. VanPool, Robert D. Leonard, 2011-01-06 *Quantitative Analysis in Archaeology* introduces the application of quantitative methods in archaeology It outlines conceptual and statistical principles illustrates their application and provides problem sets for practice Discusses both methodological frameworks and quantitative methods of archaeological analysis Presents statistical material in a clear and straightforward manner ideal for students and professionals in the field Includes illustrative problem sets and practice exercises in each chapter that reinforce practical application of quantitative analysis

Statistics in Archaeology Michael Baxter, 2010-05-24 *Statistics in Archaeology* presents the particular statistical methodologies which can be used to address specific issues and problems in archaeology Through in depth case studies the author illustrates how such techniques can be employed in the archaeological context These examples are taken from a wide range of different countries and reflect the international nature of archaeology and its students and practitioners The technical level of the book is intermediate and is for the academic and professional

archaeologist needing to know more about the statistical techniques available to them The structure and content of the book mean that it will also appeal to applied statisticians interested in how statistical methods can be used in different application areas

Spatial Analysis in Archaeology Ian Hodder, Clive Orton, 1976-10-14 This 1976 text is a pioneering study in the applications to archaeology of modern statistical and quantitative techniques The authors show how these techniques when sensitively employed can dramatically extend and refine the information presented in distribution maps and other analyses of spatial relationships Techniques of interpretation by inspection can now be made more powerful and rigorous at the same time interest has turned from the examination of such sites and artefacts as things to the spatial relationships between such things their relationships to one another and to landscape features soils and other resources This book was the first to apply the available techniques systematically to the special problems and interests of archaeologists It also demonstrates to geographers and other social scientists who may be familiar with analogous applications in their own fields the exciting interdisciplinary developments this facilitates for example in studies of exchange networks trade and settlement patterns and cultural history

Digging Numbers Mike Fletcher, Gary R. Lock, 2005 This fully revised second edition retains the hands on simple approach of the first edition but with some significant modifications Still covered in detail are descriptive and inferential techniques with each one worked through by hand on a common data set but new is a chapter covering an introduction to multivariate techniques A new section provides SPSS PC programs designed with the beginner in mind This book provides a practical manual to enable any archaeologist to start using statistics as well as some more thoughtful considerations of the strengths and weaknesses of statistical methods and the results produced

Data Processing in Archaeology J. D. Richards, N. S. Ryan, 1985-05-02 This book aims to give archaeologists a non technical but thorough grounding in the use of computers

Quantitative Methods in Archaeology Using R David L. Carlson, 2017-06-26

Quantitative Methods in Archaeology Using R is the first hands on guide to using the R statistical computing system written specifically for archaeologists It shows how to use the system to analyze many types of archaeological data Part I includes tutorials on R with applications to real archaeological data showing how to compute descriptive statistics create tables and produce a wide variety of charts and graphs Part II addresses the major multivariate approaches used by archaeologists including multiple regression and the generalized linear model multiple analysis of variance and discriminant analysis principal components analysis correspondence analysis distances and scaling and cluster analysis Part III covers specialized topics in archaeology including intra site spatial analysis seriation and assemblage diversity

Strategies for Quantitative Research Grant S. McCall, 2018-02-15 It is little secret that most archaeologists are uneasy with statistics Thankfully in the modern world quantitative analysis has been made

immensely easier by statistical software packages Software now does virtually all our statistical calculations removing a great burden for researchers At the same time since most statistical analysis now takes place through the pushing of buttons in software packages new problems and dangers have emerged How does one know which statistical test to use How can one tell if certain data violate the assumptions of a particular statistical analysis Rather than focusing on the mathematics of calculation this concise handbook selects appropriate forms of analysis and explains the assumptions that underlie them It deals with fundamental issues such as what kinds of data are common in the field of archaeology and what are the goals of various forms of analysis This accessible textbook lends a refreshing playfulness to an often humorless subject and will be enjoyed by students and professionals alike Sampling in Archaeology Clive Orton,2000-05-11 The first overview of sampling for archaeologists for over twenty years this manual offers a comprehensive account of the applications of statistical sampling theory which are essential to modern archaeological practice at a range of scales from the regional to the microscopic Bringing archaeologists up to date with an aspect of their work which is often misunderstood it includes a discussion of the relevance of sampling theory to archaeological interpretation and considers its fundamental place in fieldwork and post excavation study It demonstrates the vast range of techniques that are available only some of which are widely used by archaeologists A section on statistical theory also reviews latest developments in the field and the formal mathematics is available in an appendix cross referenced with the main text Quantifying Archaeology Stephen Shennan,2019-08-07 The second edition of this popular textbook introduces archaeology students to the use of statistics in their subject Based on the author s long running undergraduate course it explains the relevant areas of statistics in terms that archaeology students can easily assimilate This new edition includes a wider range of topics presented in greater depth reflecting the subject s growing importance within archaeology *Dictionary Catalog of the Research Libraries of the New York Public Library, 1911-1971* New York Public Library. Research Libraries,1979 **Exploratory Multivariate Analysis in Archaeology** M. J. Baxter,2015-12-31 This volume presents four techniques of multivariate analysis commonly used by archaeologists principal component analysis correspondence analysis cluster analysis and discriminant analysis Employing ordinary language and real data sets and including extensive literature reviews the book illustrates how these statistical techniques can be applied to specific archaeological questions A new introduction by the author updates his discussion in light of subsequent developments in the field of quantitative archaeology Originally published by Edinburgh University Press in 1994 **Geophysical Data in Archaeology** Armin Schmidt,2001 Geophysical Data in Archaeology in the Arts and Humanities Data Service Guides to Good Practice series is a basic guide to good practice in the creation methodology use and storage of geophysical data for archaeologists who increasingly use sophisticated methods for collecting and interpreting information *Annual Report of the Bureau of Industrial and Labor Statistics for the State of Maine* Maine.
