using statistics in the decision making process The author points out pitfalls to keep in mind when undertaking an experiment for improvement and explains how to use statistics in improvement endeavors He discusses data interpretation common tests and confidence intervals and how to plan experiments for improvement The book expands the notion of experimentation by dealing with mathematical models such as regression to optimize the improvement and understand the relationship between several factors It emphasizes the need for sampling and introduces specific techniques to make sure accuracy and precision of the data is appropriate and applicable for the study at hand The author's approach is somewhat new and unique however he details tools and methodologies that can be used to evaluate the system for prevention These tools and methodologies focus on structured repeatable processes that can be instrumental in finding real fixable causes of the human errors and equipment failures that lead to quality issues

GANs for Data Augmentation in Healthcare Arun Solanki, Mohd Naved, 2023-11-13 Computer Assisted Diagnostics CAD using Convolutional Neural Network CNN model has become an important technology in the medical industry improving the accuracy of diagnostics However the lack Magnetic Resonance Imaging MRI data leads to the failure of the depth study algorithm Medical records are often different because of the cost of obtaining information and the time spent consuming the information In general clinical data is unreliable and therefore the training of neural network methods to distribute disease across classes does not yield the desired results Data augmentation is often done by training data to solve problems caused by augmentation tasks such as scaling cropping flipping padding rotation translation affine transformation and color augmentation techniques such as brightness contrast saturation and hue Data Augmentation and Segmentation imaging using GAN can be used to provide clear images of brain liver chest abdomen and liver on an MRI In addition GAN shows strong promise in the field of clinical image synthesis In many cases clinical evaluation is limited by a lack of data and or the cost of actual information GAN can overcome these problems by enabling scientists and clinicians to work on beautiful and realistic images This can improve diagnosis prognosis and disease Finally GAN highlights the potential for location of patient information within the data This is a beneficial clinical application of GAN because it can effectively protect patient confidentiality This book covers the application of GANs on medical imaging augmentation and segmentation
