**Taming the Tornado Tube** Steve Spangler,1995-10 Explanation of vortex action in nature and instructions for performing experiments and activities with soda bottles and the tornado tube connector    **Taming the Tornado Tube** Steve Spangler,1995-10-01 Explanation of vortex action in nature and instructions for performing experiments and activities with soda bottles and the Tornado Tube connector    **Aware** ,2000    **Could We Tame a Tornado?** Cynthia O'Brien,2026-01-01 A tornado is a twisting storm that can destroy everything in its path Scientists are looking for more accurate ways to predict when a tornado might happen and how to tame a tornado's destructive power Discover some ways scientists might make this happen    **Brain-powered Science** Thomas O'Brien,2010 How can a long metal needle pass through a balloon without popping it How can water flow at very different rates through two identical funnels How can a stick placed on a table under several sheets of newspaper and extended over the edge of a table snap when quickly struck without lifting or tearing the paper Author Thomas O'Brien takes these and 30 more science inquiry activities to a higher level in this book for educators who love to surprise and challenge their students with unanticipated results Using experiments based on the science of a discrepant event an experiment or demonstration in which the outcome is not what students expect O'Brien shows how learners can be motivated to reconsider their preconceived notions and think more closely about what has actually occurred and the underlying scientific explanations What makes this volume more valuable than a mere activity book is the addition of a science education component to the extensive science content found in each activity Each discrepant event is shown to be analogous to a pedagogical principle Speaking directly to teachers O'Brien writes Your participation as teacher as learner experimenter rather than simply passive reader in these minds on activities will lead you to question and help you to revise your implicit assumptions about the nature of science teaching and learning At the same time you will develop expertise with activities that you can use with your own students The dual purpose activities thus allow you to unlock two doors with one key the doors to your own learning and to your students learning The detailed analogies between the activities and science learning make the book an ideal resource for middle and high school teachers science teacher educators and their preservice students and professional development specialists alike This thorough and thought provoking text includes more than 200 up to date internet resources as well as extensions to each of the physical science biology and chemistry activities bringing the total number of inquiry activities to nearly 120 Most important the author reminds teachers that the study of science is full of surprises and should be both meaningful and fun for students    **The Complete Home Learning Sourcebook** Rebecca Rupp,1998 Lists all the resources needed to create a balanced curriculum for homeschooling from preschool to high school level    **Forthcoming Books** Rose Arny,1996-06    **Children's Books in Print** R R Bowker Publishing,Bowker,1999-12    **Weather Matters** Bernard Mergen,2008 A kaleidoscopic book that illuminates our obsession with weather as both physical reality and evocative metaphor focusing on
