Dynamic Programming Eric V. Denardo,2012-12-27 Designed both for those who seek an acquaintance with dynamic programming and for those wishing to become experts this text is accessible to anyone who has taken a course in operations research It starts with a basic introduction to sequential decision processes and proceeds to the use of dynamic programming in studying models of resource allocation Subsequent topics include methods for approximating solutions of control problems in continuous time production control decision making in the face of an uncertain future and inventory control models The final chapter introduces sequential decision processes that lack fixed planning horizons and the supplementary chapters treat data structures and the basic properties of convex functions 1982 edition Preface to the Dover Edition [Algorithm Design with Haskell](#) Richard Bird,Jeremy Gibbons,2020-07-09 This book is devoted to five main principles of algorithm design divide and conquer greedy algorithms thinning dynamic programming and exhaustive search These principles are presented using Haskell a purely functional language leading to simpler explanations and shorter programs than would be obtained with imperative languages Carefully selected examples both new and standard reveal the commonalities and highlight the differences between algorithms The algorithm developments use equational reasoning where applicable clarifying the applicability conditions and correctness arguments Every chapter concludes with exercises nearly 300 in total each with complete answers allowing the reader to consolidate their understanding and apply the techniques to a range of problems The book serves students both undergraduate and postgraduate researchers teachers and professionals who want to know more about what goes into a good algorithm and how such algorithms can be expressed in purely functional terms
