P. Parra, 2012-03-08 The field of insect nutritional ecology has been defined by

how insects deal with nutritional and non nutritional compounds and how these compounds influence their biology in evolutionary time In contrast *Insect Bioecology and Nutrition for Integrated Pest Management* presents these entomological concepts within the framework of integrated pest management IPM It specifically addresses bioecology and insect nutrition in modern agriculture Written for graduate students and professionals in entomology this book covers neotropical information in three sections General Aspects Basic bioecology and insect nutrition artificial diets insect plant interactions insect symbionts the interface of chemical ecology with the food and insect cannibalism Specific Aspects Specific feeding guilds of insects including ants social bees leaf chewers seed suckers seed chewers root feeders gall makers detritivorous feeders pests of storage grains fruit flies aphids endo and ectoparasitoids predators crisopids and hematophagous insects Applied Aspects Host plant resistance and the design of IPM programs in the context of insect bioecology and nutrition Much of the research on which these chapters were written was done in Brazil and based on its neotropical fauna The complexity and diversity of the neotropics provides enough data that readers from all zoogeographical regions can readily translate the information in this book to their specific conditions The book s value as an entry point for further research is enhanced by the inclusion of approximately 4 000 references *Ecologically Based Integrated Pest Management* Opende Koul, Gerrit W.

Barrera, 2020-04-07 About 15 years ago we asked ourselves why the methods developed by the research institutions for the management of pests were almost not used by small landholder farmers It seemed obvious to us that conventional pest control called Integrated Pest Management was based on a reductionist approach In reviewing the literature on the subject we found that our concern was not new or unique The agreement of some authors with our ideas reinforced our efforts to find a holistic approach to pest management We took two central ideas to develop the holistic approach First pest management actions must put the farmer at the center of the system Second pest management must consider not only both pests but the other important components of the system in question This approach based on the farmers and the systems in which they are immersed is called Holistic Pest Management or HPM In this book I present the philosophy and practice of HPM a new paradigm of pest management **Environmental Engineering and Sanitation** Joseph A.
