nutrients and of proteins for growth and maintenance of tissue has been established the necessity for carbohydrates and certain types of fat for health has been documented vitamins necessary to prevent deficiency diseases have been identified and isolated and the requirement of many mineral elements for health has been demonstrated Further investigations have defined the role of these nutrients in metabolic processes and quantitated their requirements at various stages of development Additional studies have involved their use in the possible prevention of and therapy for disease conditions

Protein Quality in Humans C. E. Bodwell, James S. Adkins, Daniel T. Hopkins, 1981 Abstract A critical assessment of currently used protein quality evaluation methods is given The material includes the importance of protein quality methods used to assess the protein nutritive value PNV in humans and in vitro methodology for assessing PNV Guidelines are given for assessing the precision and accuracy in estimates of PNV in human studies the acceptable degree of accuracy and precision in such estimates can then be defined Task force reports that discuss the validity and potential use of in vitro assays for predicting protein quality for human consumption are given wz **Handbook of Normal and Therapeutic Nutrition** Juanita Archibald Eagles, Mildred N. Randall, 1980 Abstract Information on normal nutrition as well as basic principles for the use of therapeutic nutrition in health care and presented in a text for students of nursing and other health occupations The relationship of normal nutrient requirements and therapeutic diets is examined the importance of nutrition to health is emphasized throughout The first section of the text discusses factors influencing food habits nutrition assessment and common nutrition problems of Americans standard hospital diets are described The second section considers needs for energy carbohydrates proteins fats vitamins minerals and water both in normal and therapeutic situations The final section explores healthy food patterns common health problems in which diet is a contributing factor and concepts for the teaching of nutrition to clients Appendices include a sample dietary recall questionnaire desirable weight tables food exchange lists food composition tables and Recommended Dietary Allowances **The Results and Interpretation of Three Field Trials of Lysine Fortification of Cereals** National Research Council (U.S.).
