The Art

of Teaching Science Jack Hassard, Michael Dias, 2013-07-04 The Art of Teaching Science emphasizes a humanistic experiential and constructivist approach to teaching and learning and integrates a wide variety of pedagogical learning tools. These tools involve inquiry and experimentation, reflection through writing and discussion as well as experiences with students, science curriculum and pedagogy. Becoming a science teacher is a creative process and this innovative textbook encourages students to construct ideas about science teaching through their interactions with peers, professionals and instructors and through hands-on activities designed to foster a collaborative, thoughtful learning environment.

This book shows how Systemic Functional Linguistics may be used to explore and explain the grammar of scientific examination questions. The author outlines the key elements of this theory and identifies problematical structures that affect the linguistic validity of such education assessment questions. This book also shows how examination questions may provide insight into the relationship between teaching and language in science. Do candidates give an incorrect answer because they do not understand the topic or because they do not understand the language by which the question is framed? This book shows how the analysis of scientific examination questions can answer this question. These chapters show how contemporary linguistics can inform the assessment of science and address topics including the role of images, lexicography, the morphology of sentences, semantic discontinuity and the active reader. An example question is used throughout the text to illustrate the theories and each chapter has its own useful summary making it a very readable work. **The Saturday Review of Politics, Literature, Science and Art**, 1873. *The Saturday Review of Politics, Literature, Science, Art, and Finance*, 1873. *Books and Pamphlets, Including Serials and Contributions to Periodicals* Library of Congress.
