The Neuroscience of Intelligence Richard J. Haier, 2023-07-27 This new edition provides an accessible guide to advances in neuroscience research and what they reveal about intelligence. Compelling evidence shows that genetics plays a major role as intelligence develops from childhood and that intelligence test scores correspond strongly to specific features of the brain assessed with neuroimaging. In detailed yet understandable language Richard J. Haier explains cutting edge techniques based on DNA and imaging of brain connectivity and function. He dispels common misconceptions such as the belief that IQ tests are biased or meaningless. Readers will learn about the real possibility of dramatically enhancing intelligence and the positive implications this could have for education and social policy. The text also explores potential controversies surrounding neuro poverty, neuro socioeconomic status and the morality of enhancing intelligence for everyone.

Barry J. Pavelec, Stephen M. Kirschner, 1980 **Philosophy of Science** Wang Wei, 2020-12-29 The book is a translation of the second edition of a much used and research based Chinese textbook. As a succinct and issue based introduction to the Western philosophy of science the book brings eight focal issues in the field to the fore and augments each topic by incorporating Chinese perspectives. Followed by an overview of the historical framework and logical underpinnings of the philosophy of science the book thoroughly discusses eight issues in the discipline: 1. the criteria of cognitive meaning, 2. induction and confirmation, 3. scientific explanation, 4. theories of scientific growth, 5. the demarcation between science and pseudoscience, 6. scientific realism and empiricism, 7. the philosophy of scientific experimentation, 8. science and value. Not confined to Western mainstream discourse in this field the book also introduces voices of Chinese philosophers of note and adopts a stance that productively combines logical empiricism and Kuhnianism both of which tend to be covered in less detail by many English language textbooks. In the final chapter the author offers a prognosis regarding the future of the discipline based on recent trends. This book will be of value to students who study philosophy of science and hope to gain a better understanding of science and technology.

Nonideal Theory and Content Externalism

Jeff Engelhardt, 2024 This book charges that just about every philosophical theory of mind or language developed over the past 50 years in the West is systematically inaccurate. Systemic oppression has influenced the processes that theories of mind or language

purport to identify however that same systemic oppression has also made it so that most middle to upper class White men including most philosophers of mind or language are ignorant of systemic oppression. Consequently most theories of mind or language are systematically inaccurate because they fail to account for the influences of systemic oppression. Philosopher Jeff Engelhardt argues for the de idealization of two influential theories in the philosophy of mind and language social externalism and objective type externalism and considers some consequences of the de idealization project. Following the work of Charles Mills Engelhardt argues that ideal theories adopt oppression obscuring assumptions while nonideal theories avoid them or at least try to. Ideal theories assume that language users are basically equal and that social institutions and structures are basically just but scholarship on Western social relations institutions and structures shows that in fact each of these is systematically influenced by oppression. Consequently ideal theories tend to be systematically inaccurate. Moreover since oppression systematically produces ignorance of systemic oppression such systematically inaccurate theories are likely the norm rather than the exception. Engelhardt shows that once we've shown that oppression systematically influences the processes that determine linguistic meanings according to content externalism then we have reason to expand our notion of hermeneutical injustice. We have evidence that hermeneutical injustice occurs systematically and we have grounds for expanding discussions of conceptual engineering to include questions about engineering the processes that determine concepts not just concepts themselves.
