Peña,Daniela Valdez-Jasso,Zhiyong Li,Youjun Liu,2022-05-03 Forthcoming Books Rose Arny,1996-06 **Evolutionary Biology of Tumor Initiation and Progression** Yusuke Suenaga,Erich Bornberg-Bauer ,Mamoru Kato,2024-06-28

Cancer is characterized by heterogeneous cells with capacity for self renewal and selective pressures in the microenvironment which constantly change the cell population This descent with modification is consistent with Darwin's definition of evolution and accordingly cancer progression can be captured from an evolutionary angle However there is also a clear difference between cancer progression and biological evolution First contrary to the evolution of complex organisms cancer originates from cells of multicellular organisms that escape their constraints and behave like unicellular organisms Therefore from the beginning cancer cells have complex genomes that contain abundant genetic materials which they can use to change their phenotype by dynamic rearrangements and modifications Secondly epigenetic effects promote cancer evolution in contrast to the evolution of life Some tumors develop with minimal genetic alterations and cell plasticity contributes to both initiation and progression in various tumors However an evolutionary theory that encompasses these characteristics of cancer remains to be developed
