## **Sustaining Cities:**

*Sustainable Cities* Richard E. Stren, Rodney White, Rodney R. White, Joseph Whitney, 1992 The idea of sustainability has become central to international dialogues on development. This study focuses on cities and examines the implications that urbanization has for the future of the environment. The contributors explain how the development of infrastructure and industries poses serious threats to the environment through the pollution of air, water and soil. Many urban governments are actively initiating programs to mitigate harmful environmental impacts and the discussions show that some forms of urban settlement are more benign than others. To assess whether cities can be sustainable in environmental terms this book brings together comprehensive studies of the urban experience in nine major countries and regions: the United States, Canada, Western Europe, Eastern Europe, Japan, Southeast Asia, China and Hong Kong, Africa and Latin America. The chapters examine the meaning of sustainable development in a specific region, the growth and structure of urban systems, the effects of possible climatic changes on urban areas, the political environment within which cities operate and the pressures caused by intense urban use of services and natural resources. Chapters conclude with policy proposals for increasing sustainability.

*Sustainable Cities in Europe* Peter Nijkamp, Adriaan Perrels, 2014-04-08 Worldwide urbanization is steadily increasing yet many modern cities are becoming less and less able to accommodate the growth in their population. Congestion, pollution, low quality housing, social fragmentation, noise, crime and inadequate social services all contribute to a declining quality of urban life. Planners and policy makers are battling to alleviate the problems with a variety of urban renewal initiatives and energy environmental policies have become central to their quest for urban sustainability. *Sustainable Cities in Europe* gives a comprehensive introduction to the available urban energy and environmental policies. Drawing on a detailed analysis of the CITIES programme of the Commission of the European Communities the book includes detailed case studies of European cities which are devising and implementing alternative strategies for sustainable growth and development. The cities discussed include Amsterdam, Besançon, Bragança, Cadiz, Dublin, Esch, Alzette, Gent, Mannheim, Newcastle, Odense, Thessaloniki and Turin. The policy discussions and case studies in this book will be invaluable for all those professionally or academically involved in the pressing issue of city planning development. Peter Nijkamp is Professor in Regional Urban and Environmental Economics at Free University Amsterdam. Author of numerous books he is a world authority on environmental economics and urban policy. Adriaan Perrels is head of the research department of the Energy Studies Centre in Petten, The Netherlands. He has worked extensively in the field of energy planning and electricity load management. Originally published in 1994.

stronger economies and more connections it also carries risks and unforeseeable consequences To deepen our understanding of this complex process and its importance for global sustainability we need to build interdisciplinary knowledge around a systems approach Urban Planet takes an integrative look at our urban environment bringing together scholars from a diverse range of disciplines from sociology and political science to evolutionary biology geography economics and engineering It includes the perspectives of often neglected voices architects journalists artists and activists The book provides a much needed cross scale perspective connecting challenges and solutions on a local scale with drivers and policy frameworks on a regional and global scale The authors argue that to overcome the major challenges we are facing we must embark on a large scale reinvention of how we live together grounded in inclusiveness and sustainability This title is also available Open Access

### **Planning, Development and Management of Sustainable Cities** Tan Yigitcanlar,Md. (Liton)

Kamruzzaman,2019-04-30 The concept of sustainable urban development has been pushed to the forefront of policymaking and politics as the world wakes up to the impacts of climate change and the destructive effects of the Anthropocene Climate change has emerged to be one of the biggest challenges faced by our planet today threatening both built and natural systems with long term consequences which may be irreversible While there is a vast body of literature on sustainability and sustainable urban development there is currently limited focus on how to cohesively bring together the vital issues of the planning development and management of sustainable cities Moreover it has been widely stated that current practices and lifestyles cannot continue if we are to leave a healthy living planet to not only the next generation but also to the generations beyond The current global school strikes for climate action known as Fridays for Future evidences this The book advocates the view that the focus needs to rest on ways in which our cities and industries can become green enough to avoid urban ecocide This book fills a gap in the literature by bringing together issues related to the planning development and management of cities and focusing on a triple bottom line approach to sustainability     *Sharing Cities* Duncan

McLaren,Julian Agyeman,2015-12-04 How cities can build on the sharing economy and smart technology to deliver a sharing paradigm that supports justice solidarity and sustainability The future of humanity is urban and the nature of urban space enables and necessitates sharing of resources goods and services experiences Yet traditional forms of sharing have been undermined in modern cities by social fragmentation and commercialization of the public realm In *Sharing Cities* Duncan McLaren and Julian Agyeman argue that the intersection of cities highly networked physical space with new digital technologies and new mediated forms of sharing offers cities the opportunity to connect smart technology to justice solidarity and sustainability McLaren and Agyeman explore the opportunities and risks for sustainability solidarity and justice in the changing nature of sharing McLaren and Agyeman propose a new sharing paradigm which goes beyond the faddish sharing economy seen in such ventures as Uber and TaskRabbit to envision models of sharing that are not always commercial but also communal encouraging trust and collaboration Detailed case studies of San Francisco Seoul Copenhagen Medell n

Amsterdam and Bengaluru formerly Bangalore contextualize the authors discussions of collaborative consumption and production the shared public realm both physical and virtual the design of sharing to enhance equity and justice and the prospects for scaling up the sharing paradigm though city governance They show how sharing could shift values and norms enable civic engagement and political activism and rebuild a shared urban commons Their case for sharing and solidarity offers a powerful alternative for urban futures to conventional race to the bottom narratives of competition enclosure and division

After Sustainable Cities? Mike Hodson, Simon Marvin, 2014-04-24

A sustainable city has been defined in many ways Yet the most common understanding is a vision of the city that is able to meet the needs of the present without compromising the ability of future generations to meet their own needs Central to this vision are two ideas cities should meet social needs especially of the poor and not exceed the ability of the global environment to meet needs After Sustainable Cities critically reviews what has happened to these priorities and asks whether these social commitments have been abandoned in a period of austerity governance and climate change and replaced by a darker and unfair city This book provides the first comprehensive and comparative analysis of the new eco logics reshaping conventional sustainable cities discourse and environmental priorities of cities in both the global north and south The dominant discourse on sustainable cities with a commitment to intergenerational equity social justice and global responsibility has come under increasing pressure Under conditions of global ecological change international financial and economic crisis and austerity governance new eco logics are entering the urban sustainability lexicon climate change green growth smart growth resilience and vulnerability ecological security This book explores how these new eco logics reshape our understanding of equity justice and global responsibility and how these more technologically and economically driven themes resonate and dissonate with conventional sustainable cities discourse This book provides a warning that a more technologically driven and narrowly constructed economic agenda is driving ecological policy and weakening previous commitment to social justice and equity After Sustainable Cities brings together leading researchers to provide a critical examination of these new logics and identity what sort of city is now emerging as well as consider the longer term implication on sustainable cities research and policy

Rethinking Sustainable Cities David Simon, 2016-08-31 Available Open Access under CC BY NC licence Sustainable urbanisation has moved to the forefront of global debate research and policy agendas over recent years Rapid urbanisation throughout China India and many other low and middle income countries poses new challenges both locally and internationally at a time when urban areas worldwide are threatened by climate environmental change This compact book is designed to make a signal contribution to the sustainable urbanisation agenda through authoritative interventions contextualising assessing and explaining clearly the relevance and importance of three central characteristics of sustainable towns and cities everywhere namely that they should be accessible green and fair These three terms form key tenets of the work of Mistra Urban Futures MUF an international research centre on sustainable urbanisation based in Gothenburg

Sweden and working through transdisciplinary research platforms there in Greater Manchester UK Cape Town South Africa and Kisumu Kenya Additional platforms are being established in southern Sweden Asia and Africa *Resilient Sustainable Cities* Leonie Pearson, Peter Newton, Peter Roberts, 2014-01-10 Urbanization is occurring at an unprecedented rate by 2050 three quarters of the world's people will live in urban environments The cars we drive products we consume houses we live in and technology we use will all determine how sustainable our cities will be Bridging the increasing divide between cross disciplinary academic insights and the latest practical innovations Resilient Sustainable Cities provides an integrated approach for long term future planning within the context of the city as a whole system In the next 30 years cities will face their biggest challenges yet as a result of long term or slow burn issues population growth will stretch to the breaking point urban infrastructure and service capacity resource scarcity such as peak oil potable water and food security will dramatically change what we consume and how environmental pressures will change how we live and where and shifting demographic preferences will exacerbate urban pressures Cities can't keep doing what they've always done and cope we need to change current urban development to achieve resilient sustainable cities Resilient Sustainable Cities provides practical and conceptual insights for practitioners researchers and students on how to deliver cities which are resilient to slow burn issues and achieve sustainability The book is organized around three overarching themes pathways to the future innovation to deliver the future leadership and governance issues The book includes a variety of perspectives conveyed through international case studies and examples of cities that have transformed for a sustainable future exploring their successes and failures to ensure that readers are left with ideas on how to turn their city into a resilient sustainable city for the future

**Sustainable Cities** Simon Joss, 2017-08-24 Interest in the sustainable city is growing around the world and with it come important questions about governing sustainable urban development Why are there blockages to achieving the goal of a sustainable city How is it possible to overcome the practical difficulties that initiatives often face And how can an increasingly technocratic focus be rebalanced with more of a public perspective In this wide ranging text Simon Joss examines mainstream policy and practice and looks at the approaches that can overcome some of their drawbacks The author examines the core elements of sustainable planning and how processes of innovation governance and policy making work together to achieve sustainable urban change He assesses the various challenges faced at both the domestic and international level and across a range of urban scales These challenges include how to resolve environmentally problematic ways of city living at the same time as providing for urban social and economic development and how to adapt the idea and reality of the sustainable city to different geopolitical contexts The author recognizes that there is no one size fits all solution and examines the range of methods available In an era where entirely new eco cities are being built and established ones being retro fitted in response to environmental pressures this text looks at the varying successes of the urban sustainability movement and its relationship to the planners policy makers and citizens who are inseparable from it Providing an accessible

account of the latest developments in research and policy as well as examples from around the world this is indispensable reading for students researchers and practitioners alike **The Future of Sustainable Cities** John Flint, Mike Raco, 2012

Sustainable Cities Programme, 1998 **America's Most Sustainable Cities and Regions** John W. Day, Charles

Hall, 2016-01-23 This book takes you on a unique journey through American history taking time to consider the forces that shaped the development of various cities and regions and arrives at an unexpected conclusion regarding sustainability. From the American Dream to globalization to the digital and information revolutions we assume that humans have taken control of our collective destinies in spite of potholes in the road such as the Great Recession of 2007-2009. However these attitudes were formed during a unique 100 year period of human history in which a large but finite supply of fossil fuels was tapped to feed our economic and innovation engine. Today at the peak of the Oil Age the horizon looks different. Cities such as Los Angeles, Phoenix and Las Vegas are situated where water and other vital ecological services are scarce and the enormous flows of resources and energy that were needed to create the megalopolises of the 20th century will prove unsustainable. Climate change is a reality and regional impacts will become increasingly severe. Economies such as Las Vegas which are dependent on discretionary income and buffeted by climate change are already suffering the fate of the proverbial canary in the coal mine. Finite resources will mean profound changes for society in general and the energy intensive lifestyles of the US and Canada in particular. But not all regions are equally vulnerable to these 21st century megatrends. Are you ready to look beyond America's Most Livable Cities to the critical factors that will determine the sustainability of your municipality and region? Find out where your city or region ranks according to the forces that will impact our lives in the next years and decades. Find out how resource availability and ecological services shaped the modern landscape emerging megatrends will make cities and regions more or less livable in the new century. Your city or region ranks on a sustainability map of the United States urban metabolism puts large cities at particular risk. Sustainability factors will favor economic solutions at a local rather than global level. These principles apply to industrial economies and countries globally. **Sustainable Cities** Kimberly

Etingoff, 2017-03-16 This title includes a number of Open Access chapters. Two trends come together in the world's cities to make urban sustainability a critical issue today. First greater and greater numbers of people are living in urban areas and are projected to do so for the foreseeable future. Additionally cities contribute to climate change in a significant way and must make systemic changes to mitigate and adapt to climate change effects. Urban planners face serious challenges in enhancing

sustainability but also have an important set of tools available for creating innovative solutions This book adds to the conversation about the place of urban planning in the creation and maintenance of sustainable cities **From Understanding to Action** Marco Keiner,2004-11 This book provides a framework for the design implementation and measurement of sustainable urban development in developing countries It presents the findings of an AGS sponsored project Based on case studies in Johannesburg Gabarone and Santiago de Chile the book identifies challenges and potentials for sustainable urban development and suggests alternative ways that governments city regions communities and planners can respond to these challenges The introductory part highlights the problem of global urbanization focusing on cities of sub Saharan Africa and Latin America The design part includes a context needs analysis followed by recommendations of broad frameworks for sustainable urban development The implementation part looks at the institutional and policy framework and strategies necessary for sustainable urban development while the measurement part deals with the required mechanisms and tools for evaluating sustainable urban development policy and strategies as well as the review of outcomes impacts indicators This publication is of special interest for university researchers and students international experts and organizations for sustainable urban development in developing countries but also practitioners from planning authorities worldwide
