Hormones Martin Luck, 2014-07-24 Hormones play an integral part in the balance and workings of the body. While many people are broadly aware of their existence, there are many misconceptions and few are aware of the nature and importance of the endocrine system. In this Very Short Introduction, Martin Luck explains what hormones are, what they do, where they come from, and how they work. He explains how the endocrine system operates, highlighting the importance of hormones in the regulation of water and salt in the body, how they affect reproduction and our appetites, and how they help us adjust to different environments such as travel across time zones. In this fresh and modern treatment, Luck also touches on the ethical and moral issues surrounding research methods, testing on animals, and hormone misuse. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable. **Assumptions Inhibiting Progress in**

Comparative Biology Brian I. Crother, Lynne R. Parenti, 2016-11-18 This book is a thought-provoking assessment of assumptions inhibiting progress in comparative biology. The volume is inspired by a list generated years earlier by Donn Rosen, one of the most influential, innovative, and productive comparative biologists of the latter 20th century. His list has assumed almost legendary status among comparative evolutionary biologists. Surprisingly, many of the obstructing assumptions implicated by Rosen remain relevant today. Any comparative biologist hoping to avoid such assumptions in their own research will benefit from this introspective volume. *Biochemistry* Donald Voet, Judith G. Voet, 2010-12-01 The Gold Standard in Biochemistry text books. Biochemistry 4e is a modern classic that has been thoroughly revised. Don and Judy Voet explain biochemical concepts while offering a unified presentation of life and its variation through evolution. Incorporates both classical and current research to illustrate the historical source of much of our biochemical knowledge. **Catalog of**

Biochemistry 4e is a modern classic that has been thoroughly revised. Don and Judy Voet explain biochemical concepts while offering a unified presentation of life and its variation through evolution. It incorporates both classical and current research to illustrate the historical source of much of our biochemical knowledge. Perspectives on the Coordination of Movement S.A. Wallace, 1976-01-01 Is there a right way to study coordination? What experimental paradigms are appropriate? Are there laws and principles that the biological system uses to coordinate movement? Do all biological systems, human and otherwise, share these same principles? Is coordination inherited or acquired? Is it a central nervous system, muscular, or mechanical problem? Indeed, what is coordination, and how can it be quantified? This volume attempts to help to answer some of these questions by bringing together a collection of conceptual approaches and empirical investigations of the coordination of movement. The authors of the chapters are well

known and respected researchers from a variety of disciplines New theoretical developments such as in synergetics and dynamic pattern formation are presented together with extensive reviews and new experimental work on infant motor behavior and the coordination of prehension multi limb gait and speech movement The volume contains perspectives on the problem of movement coordination relevant to various disciplines such as psychology biology engineering and robotics physical education physical therapy kinesiology and physiology and so will be of interest to all students and scientists working in such fields
