Iteration Theory (Ecit 91) - Proceedings Of The European Conference J P Lampreia,Jaume Llibre,Christian Mira,Gyoergy Targonski,Jose Sousa Ramos,1992-12-18 The main theme of the ECIT conferences is Iteration Theory on the borderline between Dynamics and Functional Equations The aim is to foster symbiosis between mainstream dynamics and iteration theory treated in the style of functional equations theory The following topics are focused turbulence and iteration characterization of chaos kneading theory symbolic dynamics bifurcation periods of maps topological dynamics discrete retarded dynamical systems cellular automata as dynamical systems iterative roots of formal power series iterative roots of polynomials phantom iterative roots iterative groups and semigroups families of commuting functions algebraic aspects of iteration theory and functional equations

Chaotic Dynamics in Two-dimensional Noninvertible Maps C. Mira,1996 This book is essentially devoted to complex properties Phase plane structure and bifurcations of two dimensional noninvertible maps i e maps having either a non unique inverse or no real inverse according to the plane point They constitute models of sets of discrete dynamical systems encountered in Engineering Control Signal Processing Electronics Physics Economics Life Sciences Compared to the studies made in the one dimensional case the two dimensional situation remained a long time in an underdeveloped state It is only since these last years that the interest for this research has increased Therefore the book purpose is to give a global presentation of a matter available till now only in a partial form Fundamental notions and tools such as critical manifolds as the most part of results are accompanied by many examples and figures

Huertas, Rabinder N. Madan, 1999-07-03 Authoritative and visionary this festschrift features 12 highly readable expositions of virtually all currently active aspects of nonlinear science It has been painstakingly researched and written by leading scientists and eminent expositors including L. Shilnikov, R. Seydel, I. Prigogine, W. Porod, C. Mira, M. Lakshmanan, W. Lauterborn, A. Holden, H. Haken, C. Grebogi, E. Doedel, and L. N. Sharkovskii's landmark paper on the coexistence of periods for interval maps several lines of research have been developed opening applications of models to help understand a number of phenomena from a wide variety of fields such as biology, economics, physics, etc. The meeting served to summarize the progress made since Professor Sharkovskii's discovery and to explore new directions **Annales Mathematicae Silesianae**, 1999 Grazer mathematische Berichte, 2002 **Solitons, Geometry, and Topology**, 1999 Publicationes mathematicae Kossuth Lajos Tudományegyetem.
