## Slowing Down:

*100 Poems to Break Your Heart* Edward Hirsch, 2021-03-30 A really beautiful book of poems that delve into and help us transcend suffering loss fear and loneliness by the author of *How to Read a Poem* The Boston Globe Implicit in poetry is the idea that we are enriched by heartbreaks by the recognition and understanding of suffering not just our own suffering but also the pain of others We are not so much diminished as enlarged by grief by our refusal to vanish or to let others vanish without leaving a record And poets are people who are determined to leave a trace in words to transform oceanic depths of feeling into art that speaks to others In *100 Poems to Break Your Heart* Edward Hirsch prize winning poet critic and author of *How to Read a Poem* selects 100 poems from the nineteenth century to the present and illuminates them unpacking context and references to help the reader fully experience the range of emotion and wisdom within them Darkly illuminating Booklist starred review These 100 poems will indeed break hearts but they also offer examples of resilience the lasting impact of words and a wisdom that a reader can return to and share New York Journal of Books Nukleonik ,1969

R. Cameron, 1982-11-30 This book is intended to provide an introduction to the basic principles of nuclear fission reactors for advanced undergraduate or graduate students of physics and engineering The presentation is also suitable for physicists or

engineers who are entering the nuclear power field without previous experience with nuclear reactors No background knowledge is required beyond that typically acquired in the first two years of an undergraduate program in physics or engineering Throughout the emphasis is on explaining why particular reactor systems have evolved in the way they have without going into great detail about reactor physics or methods of design analysis which are already covered in a number of excellent specialist texts The first two chapters serve as an introduction to the basic physics of the atom and the nucleus and to nuclear fission and the nuclear chain reaction Chapter 3 deals with the fundamentals of nuclear reactor theory covering neutron slowing down and the spatial dependence of the neutron flux in the reactor based on the solution of the diffusion equations The chapter includes a major section on reactor kinetics and control including temperature and void coefficients and xenon poisoning effects in power reactors Chapter 4 describes various aspects of fuel management and fuel cycles while Chapter 5 considers materials problems for fuel and other constituents of the reactor The processes of heat generation and removal are covered in Chapter 6
