Andreas Gorbach,Julia Dannath-Schuh,Franziska Cusumano,2019-04-15 The increase in volatility uncertainty complexity and ambiguity in business and society is confronting many managers with the question of which skills they need to adapt or relearn to act effectively as managers in the future The authors show you that the key to this does not lie in the learning of new management concepts On the contrary effective leadership is much more about homing in and focusing on what has not changed namely the core attitudes and patterns of action inherent in human beings Content Leadership as a transformation process A basic framework of patterns of action as a basis for effective leadership and personality growth Morality as the inner orientation and basis for economically sustainable leadership Courage as a catalyst **Tend the Eternal Orchard**

*Larch* Ursula Martin, Jeannette Marie Wing, 1993 The papers in this volume were presented at the First International Workshop on Larch held at MIT Endicott House near Boston on 13–15 July 1992. Larch is a family of formal specification languages and tools and this workshop was a forum for those who have designed the Larch languages built tool support for them particularly the Larch Prover and used them to specify and reason about software and hardware systems. The Larch Project started in 1980 led by John Guttag at MIT and James Horning then at Xerox Palo Alto Research Center and now at Digital Equipment Corporation Systems Research Center DEC SRC. Major applications have included VLSI circuit synthesis medical device communications compiler development and concurrent systems based on Lamport's TLA as well as several applications to classical theorem proving and algebraic specification. Larch supports a two tiered approach to specifying software and hardware modules. One tier of a specification is written in the Larch Shared Language LSL. An LSL specification describes mathematical abstractions such as sets relations and algebras. Its semantics is defined in terms of first order theories. The second tier is written in a Larch interface language one designed for a specific programming language. An interface specification describes the effects of individual modules e.g. state changes resource allocation and exceptions. Its semantics is defined in terms of first order predicates over two states where state is defined in terms of the programming language's notion of state. Thus LSL is programming language independent a Larch interface language is programming language dependent.
