Geological Processes on Continental Margins

M. S. Stoker, D. Evans, Daniel Evans, Adrian Cramp, 1998 Continental margins form the relatively narrow transition zones between the different domains of land masses and deep ocean basins They are the main regions of sediment input and transfer of sediments to the oceans and thus represent important zones of sediment flux This work addresses three topics of significance to continental margin development sedimentation mass wasting and stability It should be of interest to marine geologists sedimentologists palaeoceanographers and physical properties specialists

Glacier-influenced

Sedimentation on High-latitude Continental Margins J. A. Dowdeswell, C. Ó Cofaigh, 2002 This book examines the process and patterns of glacier influenced sedimentation on high latitude continental margins and the geophysical and geological signatures of the resulting sediments and landforms It contains a range of papers concerning modern and glacially influenced sedimentation in high latitude areas from both hemispheres many of which discuss the relationship between glacier dynamics and the sediments and landforms preserved in the glacial-marine environment
