Octogon Mathematical Magazine, 2002 *Progress in Physics*, 2012 **Smarandache Multi-Space Theory** Linfan Mao, 2006-01-01 A Smarandache multi space is a union of n various spaces equipped with different structures for an integer $n \geq 2$ which can be both used for discrete or connected spaces particularly for geometries and space times in theoretical physics This monograph concentrates on characterizing various multi spaces and includes three parts The first part is on algebraic multi spaces with structures such as those of multi groups multi rings multi vector spaces multi metric spaces multi operation systems and multi manifolds also multi voltage graphs multi embedding of a graph in an n manifold etc The second discusses Smarandache geometries including those of map geometries planar map geometries and pseudo plane geometries in which the Finsler geometry particularly the Riemann geometry appears as a special case of the Smarandache geometries The third part of this book considers applications of multi spaces to theoretical physics including relativity theory M theory and cosmology Multi space models for p branes and cosmos are constructed and some questions in cosmology are clarified by multi spaces The first two parts are relatively independent for reading and in each part open problems are included for further research of interested readers **Mathematical Reviews**, 2007 **Indian Science Abstracts**, 2009-05
Forthcoming Books Rose Arny, 2002-02 **International Directory of Little Magazines & Small Presses** Lenard V. Fulton, 2005 *International Journal of Applied Mathematics*, 2007 **International Directory of Little Magazines and Small Presses** Len Fulton, 2004 Lists small magazine and book publishers and includes subject and regional indexes *The International Directory of Little Magazines and Small Presses* Len Fulton, 2006-09 The biggest revision in ten years of the Bible of the business Wall Street Journal This essential reference for writers librarians students of modern literature and readers worldwide was started in the 1960s during the initial phase of the small press revolution It is safe to say that in its forty first edition the directory is a publishing legend It includes information on over 5 000 presses and journals from around the world listing addresses manuscript requirements payment rates and recent publications Subject and regional indexes are also provided **Abstracts of Papers Presented to the American Mathematical Society** American Mathematical Society, 1996 **Directory of Little Magazines and Small Presses** Len Fulton, 2008 **Libertas Mathematica**, 1996
Dissertation Abstracts International, 1998 **NeutroGeometry and Fractal Geometry** Erick González-Caballero, Maikel Y. Leyva-Vázquez, Noel Batista-Hernández, Florentin Smarandache, 2024-01-01 Geometries are structures with certain elements like points lines planes and spaces among others that satisfy certain definitions axioms properties and theorems for the total of the elements NeutroGeometries are geometric structures that meet at least one of these concepts only partially never for 100% or 0% of the elements Until now NeutroGeometries have been developed from

the ideas of classical geometries such as Euclidean Hyperbolic Elliptic Mixed Smarandache geometries among others where axiomatization is the basis of their construction This paper aims to discuss some ideas about the relationship between NeutroGeometries and fractal geometry This relation is not necessarily obvious it is mainly established because fractals are structures used to model deterministic chaotic phenomena The fractal dimension is a numerical value used to measure the complexity of the figure and the maps that represent chaotic phenomena The more complex the phenomenon the more unpredictable it becomes and therefore the more uncertain and indeterminate This indeterminacy is essentially ontological since it deals mostly with natural phenomena This relationship is proposed in this article for associating the concepts of NeutroGeometry that present degrees of uncertainty or indeterminacy and fractal geometries that model phenomena where unpredictability exists This idea is reinforced in some works where a direct relationship between entropy and the fractal dimension is demonstrated Automorphism Groups of Maps, Surfaces and Smarandache Geometries (partially post-doctoral research for the Chinese Academy of Sciences, Beijing) Linfan Mao, 2005 A combinatorial map is a connected topological graph cellularly embedded in a surface This monograph concentrates on the automorphism group of a map which is related to the automorphism groups of a Klein surface and a Smarandache manifold also applied to the enumeration of unrooted maps on orientable and non orientable surfaces A number of results for the automorphism groups of maps Klein surfaces and Smarandache manifolds and the enumeration of unrooted maps underlying a graph on orientable and non orientable surfaces are discovered An elementary classification for the closed surfaces is found Open problems related to the combinatorial maps with the differential geometry Riemann geometry and Smarandache geometries are also presented in this monograph for the further applications of the combinatorial maps to the classical mathematics Notices of the American Mathematical Society American Mathematical Society, 1993
