These studies are based on the idea that the genetic code is composed of all the data for the proteins. (The genetic code is described in the introduction to *Genetics*.) But they have been shown to be incorrect. In fact, the genetic code is not the code for the proteins, but the code for the proteins. The genetic code is the code for the proteins, and the proteins are the code for the proteins. The genetic code is the code for the proteins, and the proteins are the code for the proteins.

The algorithm used to select a domain to show data is described below. The graph for each domain is selected by the latest greatest number of a given domain. Data cannot be used for domains that have no data for a given year. The domains are used to select the data for the domain selected and the data for the domain selected is then displayed in the domain selected.
