Mishra,Subal C. Kumbhakar,Gudbrand Lien,2023-10-02 The book addresses and documents farmers risks in developing and emerging economies It draws lessons from experimental economics on measuring risk preferences attitudes gender differences in managing risks and risk management strategies in countries across Africa and Asia It argues policy makers especially in emerging economies need a better understanding of farmers attitudes toward risk and choices of risk management strategies when designing policies to support production agriculture The book includes chapters on three themes understanding risk attitudes and preferences using experimental economics to measure risk preferences and risk management strategies and understanding climate change risk and risk management The book critically examines the currently held beliefs about risk preference attitudes and empirical estimation of risk management strategies emphasizing developing and emerging economies DEE This book is ideal for students and researchers in universities and research organizations who conduct applied research on public policy community development and rural development and will also be of interest to policy makers in those fields

**The Social Influence Processes** James T. Tedeschi,2017-07-12 Social psychologists have always been concerned with two person interactions and the factors enabling one person to gain dominance Although social psychology has devised a revolutionary set of techniques to investigate the phenomenon of power hypotheses are too often ambiguously stated research programs end in cul de sacs and experiments take on the character of one shot studies In an attempt to stimulate new directions in research and to provide cumulative emphasis on the development of scientific theory in the area of power relations Tedeschi has assembled original and path breaking essays from a dozen outstanding scholars and researchers in the behavioral sciences More tightly integrated than leading books in the field of power relations The Social Influence Processes focuses on two person interactions A full explanation of the terms

power and influence is followed by an analysis of the major variables in connections between two persons that must be taken into account in a scientific theory of social influence. The subsequent chapters respond to the categories established attempting a comprehensive construction of social reality and offering suggestions and techniques for measuring and ordering its complexity. Particular areas of research and theory are isolated for consideration in depth such topics as personality as a power construct. Power and Personality by Henry L Minton influence in exchange theory The Tactical Use of Social Power by Andrew Michener and Robert W Suchner and leadership through charisma Interpersonal Attraction and Social Influence by Elaine Walster and Darcy Abrahams. In the final chapter Tedeschi Thomas Bonoma and Barry R Schlenker attempt to provide a general theory of social influence processes as they affect the target individual by reviewing the research literature in their own theoretical terms. This remarkable volume will be of interest to students as well

**Experts in Uncertainty** Roger M. Cooke, 1991-10-24 This book is an extensive survey and critical examination of the literature on the use of expert opinion in scientific inquiry and policy making. The elicitation representation and use of expert opinion is increasingly important for two reasons advancing technology leads to more and more complex decision problems and technologists are turning in greater numbers to expert systems and other similar artifacts of artificial intelligence. Cooke here considers how expert opinion is being used today how an expert's uncertainty is or should be represented how people do or should reason with uncertainty how the quality and usefulness of expert opinion can be assessed and how the views of several experts might be combined. He argues for the importance of developing practical models with a transparent mathematic foundation for the use of expert opinion in science and presents three tested models termed classical Bayesian and psychological scaling. Detailed case studies illustrate how they can be applied to a diversity of real problems in engineering and planning

**Objective and Subjective Probability** Simin Sadat Chavoshi Jolfaee, 2015 My thesis addresses several issues of importance to probability education presented in four separate studies. The first study attends to definitions and examples of probability offered through resources and produced by undergraduate students. The findings suggest that the everyday notion of probability predates and dominates students conception of mathematical probability and point out the important role learner generated examples play in identifying the scope of learners understanding of probability. The second study examines the distinction between mathematical and everyday aspects of zero probable and one probable extreme events as featured in a variety of resources and as exemplified by prospective secondary school teachers. Moreover different types of probability apparent from examples are identified and discussed. The results suggest that the participants use a range of subjective theoretical and logical approaches to construct probability examples in everyday and mathematical contexts. The results identified the need for a clear distinction between the notions of zero probable and impossible in probability instruction and call for pedagogical attention to this issue. The third

study provides an overview of some of the ways in which randomness is defined in mathematics. The study examines and interprets undergraduate students' examples, definitions, and ideas related to randomness by analyzing the participants' written responses, verbal communications, and gestures. The findings were strongly related to those of previous research. The gesture analysis further identified some aspects of randomness that were less apparent in participants' verbal responses. The fourth study examines undergraduate students' arguments concerning the probability of a fixed and unknown event. The goal of the study was to identify ambiguity caused by the interaction between everyday and mathematical probability in participants' responses. The findings suggest that reflective tasks in which students are asked to examine and reflect on opposing probability arguments may help learners to reconcile some conflicting probability ideas. Overall, my research provides enhanced understanding of how participants perceived probability related ideas as evident in their examples, definitions, and gestures. Based on the results of my research, I present ideas and tasks for instructional implementation aimed at provoking discussion about different interpretations of probability and strengthening student understanding.
