Matthias Schulenburg,2000 Despite the growing activity in the field of health economics very little is known about the influence of economic evaluation studies on health care decision making in the EU member states Several investigations about the impact of health economic studies on decision making have been done but most of them did not involve decision makers themselves In this work the results of the EUROMET survey are reported and discussed To allow an international perspective different types of decision makers in nine European countries were surveyed Besides the extent of knowledge about economic evaluation the actual and potential use of study results as well as barriers and incentives for the use of economic evaluation studies had been investigated *Studies in economic appraisal in health care* Michael F. **Methods for the Economic Evaluation of Health Care Programmes** Michael Drummond,2015 This highly successful textbook is now in its fourth edition and has been extensively updated in order to keep pace with the considerable advances in theory and practice in recent years

**Principles of Economic Appraisal in Health Care**

Michael Drummond,1980 Increasing pressures on the resources available for health care have emphasized the need to judge alternative strategies in treatment and planning from an economic perspective However existing cost benefit and cost effectiveness studies in the health field vary greatly in quality and can present a confusing picture for the health professional wishing to learn more about the economist's approach This book outlines in the simplest possible terms the methodology of economic appraisal as applied to health care pointing out pitfalls for the unwary

Dato 940526 internti **Handbook of Economic Evaluation of HIV Prevention Programs** David R. Holtgrave,1998-10-31 If resources for HIV prevention efforts were truly unlimited then this book would be entirely unnecessary In a world with limitless support for HIV prevention activities one would simply implement all effective or potentially effective programs without regard to expense We would do everything useful to prevent the further spread of the virus that has already claimed hundreds of thousands of lives in the United States and millions of lives worldwide Unfortunately funding for HIV prevention programs is limited Even though the amount of available funding may seem quite large especially in the United States it is still fixed and not sufficient to meet all needs for such programs This was very well illustrated in the summer of 1997 when over 500 community based organizations applied for a combined total of 18 million of HIV prevention funding from the U S Centers for Disease Control and Prevention CDC Less than one fifth of these organizations received support via this funding mechanism Hence although 18 million may seem like a large amount of money at first blush it is not enough to meet all of the prevention needs that could be addressed by these community based organizations

**Measuring and Valuing Health Benefits for Economic Evaluation** John Brazier,Julie Ratcliffe,Joshua Saloman,Aki Tsuchiya,2017 There are not enough resources in health care systems around the

world to fund all technically feasible and potentially beneficial health care interventions. Difficult choices have to be made and economic evaluation offers a systematic and transparent process for informing such choices. A key component of economic evaluation is how to value the benefits of health care in a way that permits comparison between health care interventions such as through costs per quality adjusted life years QALY. *Measuring and Valuing Health Benefits for Economic Evaluation* examines the measurement and valuation of health benefits reviews the explosion of theoretical and empirical work in the field and explores an area of research that continues to be a major source of debate. It addresses the key questions in the field including the definition of health the techniques of valuation who should provide the values techniques for modelling health state values the appropriateness of tools in children and vulnerable groups cross cultural issues and the problem of choosing the right instrument. This new edition contains updated empirical examples and practical applications which help to clarify the readers understanding of real world contexts. It features a glossary containing the common terms used by practitioners and has been updated to cover new measures of health and wellbeing such as ICECAP ASCOT and AQOL. It takes into account new research into the social weighting of a QALY the rising use of ordinal valuation techniques use of the internet to collect data and the use of health state utility values in cost effectiveness models. This is an ideal resource for anyone wishing to gain a specialised understanding of health benefit measurement in economic evaluation especially those working in the fields of health economics public sector economics pharmacoeconomics health services research public health and quality of life research. *Studies in economic appraisal in health care* Michael F.

Drummond, 1981 *Theory and Methods of Economic Evaluation of Health Care* Magnus Johannesson, 1996-05-31 Most economic evaluations of health care programmes at the moment are cost effectiveness and cost utility analyses. The problem with these methods is that their theoretical foundations are unclear. This has led to confusion about how to define the costs and health effects and how to interpret the results of these studies. In the environmental and traffic safety fields it is instead common to carry out traditional cost benefit analyses of health improving programmes. This striking difference in how health programmes are assessed in different fields was the original motivation for writing this book. The aim of the book is to try and provide a coherent framework within cost benefit analysis and welfare economics for the different methods of economic evaluation in the health care field. The book is written in an easily accessible manner and several examples of applications of the different methods are provided. It is my hope that it will be useful both for teaching purposes and as a guide for practitioners in the field. Glenn C Blomquist, John D Graham, Rich O'Conor and four anonymous referees provided helpful comments on previous versions of the manuscript. I would also like to express my gratitude to the following persons for helping me to prepare the manuscript: Carl Magnus Berglund, Carin Blanksvard, Ann Brown and Ziad Obeid. *Economic Analysis in Health Care* Stephen Morris, Nancy Devlin, David Parkin, 2007-06-04. Health economics is concerned with the evaluation of the effectiveness of health care particularly by examining the social opportunity costs of alternative forms of

treatment The peculiar nature of the market for health care that doctors have a major influence on both supply and demand has attracted attention as has the study of the options available for financing such services Economic Analysis in Health Care provides a comprehensive coverage of both the economics of health care systems and the evaluation of health care technologies It has been written as a core textbook for advanced undergraduate and postgraduate students with knowledge of economic analysis and will appeal to an international audience Adopts an international perspective using examples and case studies from the UK the rest of Europe and other countries Contains detailed exposition of the economic theory alongside relevant examples and applications Focuses on both market related and economic evaluation aspects of health economics some books focus purely on market related aspects Strong author team with very broad experience of writing and teaching health economics     *Applied Methods of Cost-effectiveness Analysis in Healthcare* Alastair Gray,2011 This book provides the reader with a comprehensive set of instructions and examples of how to perform an economic evaluation of a health intervention focusing solely on cost effectiveness analysis in healthcare     Applied Health Economics for Public Health Practice and Research Rhiannon Tudor Edwards,Emma McIntosh,2019-03-14 In today s world of scarce resources determining the optimal allocation of funds to preventive health care interventions PHIs is a challenge The upfront investments needed must be viewed as long term projects the benefits of which we will experience in the future The long term positive change to PHIs from economic investment can be seen across multiple sectors such as health care education employment and beyond Applied Health Economics for Public Health Practice and Research is the fifth in the series of Handbooks in Health Economic Evaluation It presents new research on health economics methodology and application to the evaluation of public health interventions Looking at traditional as well as novel methods of economic evaluation the book covers the history of economics of public health and the economic rationale for government investment in prevention In addition it looks at principles of health economics evidence synthesis key methods of economic evaluation with accompanying case studies and much more Looking to the future Applied Health Economics for Public Health Practice and Research presents priorities for research in the field of public health economics It acknowledges the role played by natural environment in promoting better health and the place of genetics environment and socioeconomic status in determining population health Ideal for health economists public health researchers local government workers health care professionals and those responsible for health policy development Applied Health Economics for Public Health Practice and Research is an important contribution to the economic discussion of public health and resource allocation     Economic Appraisal in Health Care G. Mooney,1981 First certain key questions in using such appraisal are examined together with an analysis of how various studies have tackled them Secondly some of the problems for using economic appraisal arising because of current nhs decision making procedures are considered Thirdly the difficulties in infiltrating economic appraisal into such decision making are debated In conclusion an attempt is made to appraise economic appraisal in health care     **Applied Methods of**
