A Guide to Humanistic Studies in Aging Thomas R. Cole, Ruth E. Ray, Robert Kastenbaum, 2010-06
Aging has long been of interest to scholars and practitioners in a vast array of academic fields and professions. Thomas R. Cole, Ruth E. Ray, and Robert Kastenbaum have brought together leaders from a variety of academic realms to explore how aging is depicted in the modern era and the effect of these portrayals on individuals and society.

Age Becomes Us Leni Marshall, 2015-06-30
In lively accessible prose, this book expands the reach and depth of age studies. A review of age studies methods in theory, literature, and practice leads readers to see how their own intersectional identities shape their beliefs about age, aging, and old age. This study asks readers to interrogate the texts of menopause self-help books on aging and foundational age studies works. In addition to the study of these nonfiction texts, the poetry and prose of Doris Lessing, Lucille Clifton, and Louise Erdrich serve as vehicles for exploring how age relations work, including how they invoke readers into kinships of reciprocal care as othermothers, otherdaughters, and otherelders. The literary chapters examine how gifted storytellers provide enactments, portrayals, and metaphorical uses of age to create transformative potential.

Research on Adulthood and Aging L. Eugene Thomas, 1989-01-01
By borrowing from a wide range of disciplines such as psychology, sociology, anthropology, psychiatry, and the humanities, this book gives a more human, personal voice to the many experiences of aging. The result is a new sort of social science research, one which often reads more like literature than social science. Indeed, the author uses a wide variety of techniques borrowed from the humanities, from hermeneutics to oral

histories in addition to the more traditional social science methods *SRS Research Information System Index: Facilities through Young adults*, 1974 **Postdoctoral Research Fellowship Opportunities** National Institutes of Health (U.S.), 1995 *The International Handbook on Aging* Erdman P. Palmore, Frank Whittington, Suzanne Kunkel, 2009-10-27 The United Nations World Assembly on Aging has made advancing health and well being into old age a worldwide call for action And this text at hand shows us what researchers worldwide are doing to answer that call Here three of America's most esteemed experts on aging lead a global team of contributors each an expert in his or her country to show us what the top challenges of each nation are and what top research is being done there to meet those While we cannot predict with absolute certainty all of the issues that will arise over the next 20 years we can anticipate some and we must start now to prepare for these challenges an expert from the U S Department of Health and Human Services warned at a recent UN World Assembly on Aging Needed response to the global population shift is not just the responsibility of governments but will be a product of wise long term decisions made by individuals and societies she explained In most nations globally populations are graying and the number of people aged 65 and older is vastly increasing creating a larger segment of senior citizens than the world has ever before seen Across human history the elderly accounted for no more than 3 percent of the world population By the year 2030 the elderly are expected to make up about 25 percent of the world population And while longevity is of course seen as a great success longer lifespan for such masses also creates dilemmas For example the incidence of dementia has already increased significantly with an 11 fold increase in people aged 65 and older in the US since the turn of the century and a similar increase in aged people in Scotland has researchers there scrambling to find treatments for what they expect will be a 75 percent increase in dementia over the next 25 years Chronic diseases that come with aging are already taxing health care systems in the US and around the world to Japan with most experts aware their current health systems would be overrun and lack enough staff and facilities to handle the needs of an elderly population multiplying largely in the coming two decades Increases in psychological issues such as dealing with the depression often striking aged people are impending too as are social issues such as how families and public policies will deal with the changing shape of the family *Resources in Education*, 1983 Serves as an index to Eric reports microform **The SAGE Encyclopedia of Communication Research Methods** Mike Allen, 2017-04-11 Communication research is evolving and changing in a world of online journals open access and new ways of obtaining data and conducting experiments via the Internet Although there are generic encyclopedias describing basic social science research methodologies in general until now there has been no comprehensive A to Z reference work exploring methods specific to communication and media studies Our entries authored by key figures in the field focus on special considerations when applied specifically to communication research accompanied by engaging examples from the literature of communication journalism and media studies Entries cover every step of the research process from the creative development of research topics and questions to literature reviews selection of best methods whether

Thirteen-year Report(1952-1965)of the Studies on Aging Bjorksten Research Foundation, 1965

Aging and Time Henk Visser, Jan Baars, 2020-11-25 The aim of this volume is to revitalise the debate about the concepts of time implicit in the study of aging The many problems related to aging and the aged put an enormous pressure on the gerontological community to come up with practical applications and solutions In considering research findings we must keep in mind the basic assumptions that shape and influence even the most obvious statements about aging In this multidisciplinary volume the contributors take on the important task of exploring real issues concerning temporal concepts and approaches to aging and the concepts of time that are used in thinking about aging determine to a large extent the way aging is approached Most studies of aging still use a chronological approach to define populations for research purposes that is to determine which aged should be studied and to establish how people's characteristics social economic health and so forth change as a function of age This approach may lead to an accumulation of data but does not in itself lead to explanatory knowledge The step from chronological time to chronological age should be taken cautiously if we want to consider aging processes seriously especially because chronological age is widely used in contemporary societies as a basis for regulating all kinds of processes with many consequences for individuals The arguments presented here do not deny the finitude of human life nor do they deny that aging can be observed in any individual if we compare the characteristics of that person over a

relatively long period The question is how to approach these themes to get a better understanding To achieve this we need to understand the specific significance and relativity of chronological time and uncover unfounded deductions about time in relation to aging This book will be of interest to students and professors of the social sciences humanities and aging including the methodology of aging studies professionals working in the field of aging including sociologists psychologists and biologists
