

# Introduction to Economics Study Guide

- Define economics. Explain how economics applies to the real world.
  - **Economics** is a social science that studies how individuals, governments, firms, and nations make choices on allocating scarce resources to satisfy their unlimited wants. Economics tells us how to make the best use of our scarce resources and is usually divided into two categories: Microeconomics and macroeconomics.
- Define opportunity cost. Identify the opportunity cost of various decisions made by individuals and societies.
  - **Opportunity cost** is the cost of an alternative that must be forgone to pursue a certain action. Put another way, the benefits you could have received by taking an alternative action.
- Demonstrate the difference between positive and normative statements.
  - **Positive economics** is objective and fact-based, while **normative economics** is subjective and value-based. Positive economic statements do not have to be correct, but they must be able to be tested and proved or disproved. Normative economic statements are opinion based, so they cannot be proved or disproved.
- Contrast microeconomics and macroeconomics. Give examples of questions each tries to answer.
  - **Microeconomics** deals with an economist on the small scale (ex. individuals)
  - **Macroeconomics** focuses on the big picture of economics (ex. countries)
- Name the two distinguishing differences between economic systems.
  - Who owns the factors of production?
  - What method is used to motivate, coordinate, and direct economic activity?
- Contrast a command system and a market system.
  - **The Command System**
    - Known as socialism or communism (economic, NOT political)
      - Factors of production ownership: government ownership
      - How is economic activity decided: central planning board
  - **The Market System**
    - Known as capitalism
    - Factors of production ownership: private ownership (circular flow chart)
    - How is economic activity decided: markets (supply and demand)
    - Characteristics of the market system
      - Private property: the right of persons to own and control property
      - Freedom of Enterprise and Choice: firms can produce any goods of their choice
      - Self-interest: each economic unit tries to advance their own goals
      - Competition: the pressure of independent economic buyers and sellers who have the choice to enter or leave the market
      - Markets and Prices: makers bring buyers and sellers together to decide on a common price

**The Cumulative Book Index** ,1996 A world list of books in the English language    [The German Economic Review](#) ,1971    [Critical Planning and Design](#) Camilla Perrone,2022-07-23 The book interprets and recombines within a subjective trajectory some roots pathways and conceptual frames of the planning thought that worked either as dissenting imaginations or generative source to critically question the modernist epistemologies Critical planning and design is presented in this book as a field of research inspired by critical urban theory and developed along with ideas and theories that prove to be radical alternative dialectical to the mainstream history of planning In this book scholars present what they consider as the most important books in the field of planning public policy and design They have been asked to write about a book and its author

in their preferred manner. This freedom allowed passionate and original contributions. Three main threads shape the three parts of the book. The first concerns the reconstruction of some genealogical roots of planning including Cerd Yona Friedman, Alberto Magnaghi and Ian McHarg. The second thread groups the authors who dialogue with contemporary protagonists of the planning debate including John Friedmann, Leonie Sandercock, Doreen Massey, David Harvey, Tom Sievert and Patzy Healey. The third thread includes authors who dig into relevant writings in social and philosophical sciences including Max Weber, Charles Lindblom, Henri Lefebvre, Gilles Deleuze, Félix Guattari, Georges Didi Huberman, Robert Nozick, Pandhilip K. Dick. The book is addressed to researchers of planning and urban studies who value the critical re-reading of some fundamental books. Including thoughtful and critical arguments on influential thinkers of the past two centuries, the book will enable students, scholars and researchers of planning, design, political science, geographical, environmental and urban studies to better understand the socio-spatial and ecological transformations under the contemporary transition while relying on a usable past. The book is also addressed to a wider audience of readers interested in the problems of the city and space.

**A Field on Fire** Mark D. Hersey, Ted Steinberg, 2019-01-29. A frank and engaging exploration of the burgeoning academic field of environmental history. Inspired by the pioneering work of preeminent environmental historian Donald Worster, the contributors to *A Field on Fire: The Future of Environmental History* reflect on the past and future of this discipline. Featuring wide-ranging essays by leading environmental historians from the United States, Europe, and China, the collection challenges scholars to rethink some of their orthodoxies, inviting them to approach familiar stories from new angles to integrate new methodologies and to think creatively about the questions this field is well-positioned to answer. Worster's groundbreaking research serves as the organizational framework for the collection. Editors Mark D. Hersey and Ted Steinberg have arranged the book into three sections corresponding to the primary concerns of Worster's influential scholarship: the problem of natural limits, the transnational nature of environmental issues, and the question of method. Under the heading *Facing Limits*, five essays explore the inherent tensions between democracy, technology, capitalism, and the environment. The *Crossing Borders* section underscores the ways in which environmental history moves easily across national and disciplinary boundaries. Finally, *Doing Environmental History* invokes Worster's work as an essayist by offering self-conscious reflections about the practice and purpose of environmental history. The essays aim to provoke a discussion on the future of the field, pointing to untapped and underdeveloped avenues ripe for further exploration. A forward-thinking like Worster presents bold challenges to a new generation of environmental historians on everything from capitalism and the Anthropocene to war and wilderness. This engaging volume includes a very special afterword by one of Worster's oldest friends, the eminent intellectual historian Daniel Rodgers, who has known Worster for close to fifty years.
