

Biological Psychology-is the study of the physiological, evolutionary, and developmental mechanisms of behavior and experience

- The term biological psychology emphasizes that the goal is to relate the biology to issues of psychology
- *Neuroscience* as a field certainly includes much that is relevant to behavior, but it also includes more detail about anatomy and chemistry.
- Much of biological psychology is devoted to studying brain functioning.
- At the microscopic level we find two kinds of cells: the *neurons* and the *glia*.
- **Neurons**- which convey messages to one another and to muscles and glands, vary enormously in size, shape and functions.
- The **glia**, generally smaller than neurons, have many functions but do not convey information over great distances

The Cells of The Nervous System

- The nervous system consists of two types of cells: **neurons and glia**
- **Neurons** receive information and transmit it to other cells
- **Glial cells** provide a number of functions. They do not convey information over great distances, but they aid the functioning of neurons in many ways.
- The edge of a cell is a **membrane** (often called a plasma membrane) a structure that separates the inside of the cell from the outside environment.
- **Nucleus**- the structure that contains the chromosomes.
- **Mitochondria**- the structure that performs metabolic activities.
- **Ribosomes**- are the sites at which the cell synthesizes new protein molecules.
- **Endoplasmic reticulum** a network of thin tubes that transport newly synthesized proteins to other locations
- **The structure of a Neuron:**
 - A **motor neuron** has its soma in the spinal cord. It receives excitation from other neurons through its dendrites and conducts impulses along its axon to a muscle.
 - A **sensory neuron** is specialized at one end to be highly sensitive to a particular type of stimulation
 - **Dendrites** are branching fibers that get narrower at near their ends.
 - Some also contain **dendritic spines** the short growths that increase the surface area available for synapses.
