Study Of Human Nature:

The Science of Human Nature: A Psychology For Beginners William H.Pyle, The Science of Human Nature explores human behavior by examining instincts emotions habits and social influences It aims to explain why people think feel and act the way they do using ideas from psychology and observation to better understand personality and human relationships Main Theme Study of human mind behavior and emotions through reason and observation Human Nature Humans are naturally social and moral beings Mind and Soul Thoughts desires and feelings are explained through natural laws rather than supernatural forces Morality Moral sense arises from human empathy and social instincts Education and Society Proper education and social environment can improve human behavior Purpose To understand humans scientifically to create better societies *The Science of Human Nature* William Henry Pyle,2012-08 Excerpt stronger Every year after maturity we resist change By twenty five or thirty *The Foundations of Human Nature* John Morris Dorsey,1935 **The Science of Human Nature** William Pyle,2014-11-12 The Science of Human Nature A Psychology for Beginners by William Henry Pyle With Class Exercises There are at least two possible approaches to the study of psychology by teacher training students in high schools and by beginning students in normal schools One of these is through methods of teaching and subject matter The other aims to give the simple concrete facts of psychology as the science of the mind The former presupposes a close relationship between psychology and methods of teaching and assumes that psychology is studied chiefly as an aid to teaching The latter is less complicated The plan contemplates the teaching of the simple fundamentals at first and applying them incidentally as the occasion demands This latter point of view is in the main the point of view taken in the text The author has taught the material of the text to high school students to the end that he might present the fundamental facts of psychology in simple form You are beginning the study of human nature You cannot study human nature from a book you must study yourself and your neighbors This book may help you to know what to look for and to understand what you find but it can do little more than this It is true this text gives you many facts learned by psychologists but you must verify the statements or at least see their significance to you or they will be of no worth to you However the facts considered here properly understood and assimilated ought to prove of great value to you But perhaps of greater value will be the psychological frame of mind or attitude which you should acquire The psychological attitude is that of seeking to find and understand the causes of human action and the causes consequences and significance of the processes of the human mind If your first course in psychology teaches you to look for these things gives you some skill in finding them and in using the knowledge after you have it your study should be quite worth while This book is written for young students in high schools and normal schools No knowledge can be of more use to a young person than a knowledge of himself no study can be more valuable to him than a study of himself A study of the laws of human behavior that is the purpose of this book What is human nature like Why do we act as we do How can we make ourselves different How can we make others different How can we make ourselves more efficient

How can we make our lives more worth while This book is a manual intended to help young people to obtain such knowledge of human nature as will enable them to answer these questions I have not attempted to write a complete text on psychology There are already many such books and good ones too I have selected for treatment only such topics as young students can study with interest and profit I have tried to keep in mind all the time the practical worth of the matters discussed and the ability and experience of the intended readers

On Human Nature Jonathan H. Turner,2020-11-24 In this book Jonathan H Turner combines sociology evolutionary biology cladistic analysis from biology and comparative neuroanatomy to examine human nature as inherited from common ancestors shared by humans and present day great apes Selection pressures altered this inherited legacy for the ancestors of humans termed hominins for being bipedal and forced greater organization than extant great apes when the hominins moved into open country terrestrial habitats The effects of these selection pressures increased hominin ancestors emotional capacities through greater social and group orientation This shift in turn enabled further selection for a larger brain articulated speech and culture along the human line Turner elaborates human nature as a series of overlapping complexes that are the outcome of the inherited legacy of great apes being fed through the transforming effects of a larger brain speech and culture These complexes he shows can be understood as the cognitive complex the psychological complex the emotions complex the interaction complex and the community complex **On Human Nature** Edward O.
