The Dream Experience Milton Kramer,2013-08-21 The Dream Experience provides the mental health professional with a systematic scientific basis for understanding the dream as a psychological event Milton Kramer s extensive research along with the findings of others establishes that dreams are structured not random and linked meaningfully to conscious events in daily life and past memories The book explores this link between dreams and consciousness providing a review of information about normative dreaming typical or repetitive dreams and nightmares while also showing how mental health professionals can use dream content in therapy with clients Kramer s book is an illuminating description of dreaming for dreamers therapists and neuroscientists

Fragmentation in Sleep and Mind: Linking Dissociative Symptoms, Sleep, and Memory Sue Llewellyn,Dalena van Heugten - van der Kloet,2018-03-27 Fragmented dissociated consciousness can characterize the mind in both wake and sleep states Dissociative symptoms during sleep include vivid dreaming nightmares and alterations in objective sleep parameters e g lengthening of REM sleep During waking hours dissociative symptoms exhibit disparate characteristics encompassing memory problems excessive daydreaming absentmindedness and impairments and discontinuities in perceptions of the self identity and the environment Llewellyn has theorized that a progressive and enduring de differentiation of wake and dream states of consciousness eventually results in schizophrenia a lesser degree of de differentiation may have implications for dissociative symptoms Against a background of de differentiation between the dream and wake states the papers in this volume link consciousness memory and mental illness with a special interest for dissociative symptoms

Benzodiazepine Receptor Ligands, Memory and Information Processing Ian Hindmarch,Helmut Ott,2013-03-12 The following papers were presented at an international workshop on benzo diazepine

receptor ligands memory and information processing held during the 15th CINP meeting in Puerto Rico in December 1986 and organised by the editors and T Roth This workshop was aimed at reviewing and reflecting on past experience with benzodiazepines evaluating the current state of knowledge of the actions of psychotropic drugs particularly benzodiazepines fJ carbolines and benzodiazepine antagonists and laying a basis of interest and speculation for future research into the potential use of these drugs in disorders of memory and information processing There is much published material regarding the theoretical underpinnings of what psychologists call memory and doubtless there will be several more libraries filled with theses on the topic before a consensus is reached as regards basic definitions or even meaningful distinctions between for example short and long term memory everyone has his own particular theory The qualitative and quantitative diversity of the different approaches might seem to present an insurmountable problem for the psychologist seeking a unified conceptual framework In practice the various theories produce a plethora of pragmatic and experimental techniques for psychopharmacologists and clinicians to use when investigating drugs with putative amnestic or promnestic properties
