Mogford, 2013-04-15 Ever since attempts were made to describe and explain normal language development references to exceptional circumstances have been made Variations in the conditions under which language is acquired can be regarded as natural experiments which would not be feasible or ethical under normal circumstances This can throw light on such questions as What language input is necessary for the child to learn language What is the relationship between cognition and language How independent are different components of language function Are there critical periods for language development Can we specify necessary and sufficient conditions for language impairment This book covers a range of exceptional circumstances including extreme deprivation twinship visual and auditory impairments autism and focal brain damage Written in a jargon free style and including a glossary of linguistic and medical terminology the book assumes little specialist knowledge This text is suitable for both students and practitioners in the fields of psycholinguistics developmental and educational psychology speech pathology paediatrics and special education **Language Development in the Pre-School Years** C. Communication Development William O. Haynes,Brian B. Shulman,1998 This text focuses on communication development from infancy through to adolescence by presenting detailed theoretical and research information on the language acquisition process It also provides the student with an initial exposure to the clinical applicability of the literature in the field Research Guide on Language Change Edgar C. Polomé,1990 Approaches to the Evolution of Language James R. Hurford,Michael Studdert-Kennedy,Chris Knight,1998-09-17 This is one of the first systematic attempts to bring language within the neo Darwinian framework of modern evolutionary theory without abandoning the vast gains in phonology and syntax achieved by formal linguistics over the past forty years The contributors linguists psychologists and paleoanthropologists address such questions as what is language as a category of behavior is it an instrument of thought or of communication what do individuals know when they know a language what cognitive perceptual and motor capacities must they have to speak hear and understand a language For the past two centuries scientists have tended to see language function as largely concerned with the exchange of practical information By contrast this volume takes as its starting point the view of human intelligence as social and of language as a device for forming alliances in exploring the origins of the sound patterns and formal structures that characterize language **INREAL Specialist Training Packet** ,1984
