## **Study Of Dyslexia:**

**The Study of Dyslexia** Martin Turner, John Rack, 2006-01-16 In long ago 1999 the Dyslexia Institute and Plenum Press conceived a plan for two books which would gather the best of current knowledge and practice in dyslexia studies. This would benefit those but not only those many individuals who train with us acquiring a postgraduate certificate and diploma with our higher education partner the University of York. Since then the century changed the hinge of history creaked and Plenum was taken over by Kluwer Academic Publishers but the first of the pair *Dyslexia in Practice* emerged quickly and on schedule Townend and Turner 2000. Written by staff and close associates of the Institute its chapters were produced under close scrutiny and with the expedition of a command economy. To our delight the book has seen a success which went beyond the dreams of its editors it has been adopted by other courses similar to our own and is widely referred to. The same was never likely to be true of *The Study of Dyslexia* which was envisaged as a theoretical companion volume written by authors and researchers of international repute. Nearly five years after the idea first took shape this second volume now arrives to complete the enterprise but it has been a very different project.

**A Longitudinal Study of Dyslexia** Hans-Jörgen Gjessing, Bjorn Karlsen, 2012-12-06 Psychological and educational researchers in the Scandinavian countries have cooperated in a research effort relating to children's learning disabilities for more than a decade. Support has come from the federal governments and other funding agencies in Norway, Sweden and Denmark through the Secretariat for Scandinavian Cultural Cooperation. A number of independent studies have already been published dealing with various aspects of learning disabilities in the literacy skills of reading and writing. The largest and most comprehensive study was the Bergen Project a longitudinal study of an entire cohort of children with special emphasis on those who developed specific learning disabilities in reading and writing dyslexia. These dyslexic children were studied, diagnosed and treated over a period of nine years along with various control and comparison groups which included a large subgroup with general learning disabilities retarded. The Bergen Project involved the collection of voluminous data. The children were identified by means of special diagnostic tests and treated using remedial materials and techniques that had been developed to deal with various types of dyslexia. The ophthalmology team not only tested the children but they also prescribed and provided glasses and even performed surgery when necessary. The pediatric neurologists did general pediatric and neurological examinations following up many of the cases with EEGs and CT computerized tomography brain x rays.

**Teaching English to Children with Dyslexia** Marta Zapała-Kraj, 2014-07-01 Research Paper postgraduate from the year 2009 in the subject Pedagogy Miscellaneous Topics language English abstract Currently dyslexic children are tested and diagnosed only after they tried and failed to learn how to read. The ideal situation is for a dyslexic to be diagnosed at an early age and learn how to deal with this condition as early as possible. If a dyslexic children fail to get the necessary help their learning and reading disability will usually result in frustration loss of self confidence and as can be expected low self esteem.

**Dyslexia in Children** Christopher B. Hayes, 2006 *Dyslexia* is a brain based type of learning disability that specifically impairs a person's ability to read. Although the disorder varies from person to person common characteristics among people with dyslexia are difficulty with phonological processing the manipulation of sounds and or rapid visual verbal responding. The syndrome of dyslexia does not imply low intelligence or poor educational potential and is independent of race and social background. Although dyslexia seems to be more prevalent among males than females the exact ratio is unknown the most commonly quoted figures are between 3:1 and 5:1. The evidence suggests that in at least two thirds of cases dyslexia has a genetic cause but in some cases birth difficulties may play a role. Dyslexia may overlap with related conditions such as dyspraxia attention deficit disorder with or without hyperactivity and dysphasia. In childhood its effects can be misattributed to emotional or behavioural disorders. By adulthood many dyslexics will have developed sophisticated compensating strategies that may mask their difficulties. This new book presents state of the art research in this dynamic field

Roderick Nicolson,Angela Fawcett,2010-08-13 A unique overview of research on dyslexia and an account of the underlying causes at cognitive brain and neural system levels that provides a framework for significant progress in the understanding of dyslexia and other related learning disabilities Dyslexia research has made dramatic progress since the mid 1980s Once discounted as a middle class myth dyslexia is now the subject of a complex and confusing body of theoretical and empirical research In *Dyslexia Learning and the Brain* leading dyslexia researchers Roderick Nicolson and Angela Fawcett provide a uniquely broad and coherent analysis of dyslexia theory Unlike most dyslexia research which addresses the question what is the cause of the reading disability called dyslexia the authors work has addressed the deeper question of what is the cause of the learning disability that manifests as reading problems This perspective allows them to place dyslexia research within the much broader disciplines of cognitive psychology and cognitive neuroscience and has led to a rich framework including two established leading theories the automatization deficit account 1990 and the cerebellar deficit hypothesis 2001 Nicolson and Fawcett show that extensive evidence has accumulated to support these two theories and that they may be seen as subsuming the established phonological deficit account and sensory processing accounts Moving to the explanatory level of

neural systems they argue that all these disorders reflect problems in some component of the procedural learning system a multiregion system including major components of cortical and subcortical regions The authors answer to the fundamental question what is dyslexia offers a challenge and motivation for research throughout the learning disabilities laying the foundations for future progress
