*The Murderer Next Door* David M. Buss, 2006-04-25 As acclaimed psychological researcher and author David Buss writes People are mesmerized by murder It commands our attention like no other human phenomenon and those touched by its ugly tendrils never forget Though we may like to believe that murderers are pathological misfits and hardened criminals the vast majority of murders are committed by people who until the day they kill would seem to be perfectly normal David Buss s pioneering work has made major national news in the past and this provocative book is sure to generate a storm of attention The Murderer Next Door is a riveting look into the dark underworld of the human psyche an astonishing exploration of when and why we kill and what might push any one of us over the edge A leader in the innovative field of evolutionary psychology Buss conducted an unprecedented set of studies investigating the underlying motives and circumstances of murders from the bizarre outlier cases of serial killers to those of the friendly next door neighbor who one day kills his wife Reporting on findings that are often startling and counterintuitive the younger woman involved in a love triangle is at a high risk of being killed he puts forth a bold new general theory of homicide arguing that the human psyche has evolved specialized

adaptations whose function is to kill Taking readers through the surprising twists and turns of the evolutionary logic of murder he explains exactly when each of us is most at risk both of being murdered and of becoming a murderer His findings about the high risk situations alone will be news making Featuring gripping storytelling about specific murder cases including a never used FBI file of more than 400 000 murders and a highly detailed study of 400 murders conducted by Buss in collaboration with a forensic psychiatrist and a pioneering investigation of homicidal fantasies in which Buss found that 91 percent of men and 84 percent of women have had at least one such vivid fantasy The Murderer Next Door will be necessary reading for those who have been fascinated by books on profiling lovers of true crime and murder mysteries as well as readers intrigued by the inner workings of the human mind

**Intervention in the Brain** Robert H. Blank, 2013 The political and policy implications of recent developments in

neuroscience including new techniques in imaging and neurogenetics New findings in neuroscience have given us unprecedented knowledge about the workings of the brain Innovative research much of it based on neuroimaging results suggests not only treatments for neural disorders but also the possibility of increasingly precise and effective ways to predict modify and control behavior In this book Robert Blank examines the complex ethical and policy issues raised by our new capabilities of intervention in the brain After surveying current knowledge about the brain and describing a wide range of experimental and clinical interventions from behavior modifying drugs to neural implants to virtual reality Blank discusses the political and philosophical implications of these scientific advances If human individuality is simply a product of a network of manipulable nerve cell connections and if aggressive behavior is a treatable biochemical condition what happens to our conceptions of individual responsibility autonomy and free will In light of new neuroscientific possibilities Blank considers such topics as informed consent addiction criminal justice racism commercial and military applications of neuroscience research new ways to define death and political ideology and partisanship Our political and social institutions have not kept pace with the rapid advances in neuroscience This book shows why the political issues surrounding the application of this new research should be debated before interventions in the brain become routine
