Comets III Karen J. Meech, Michael R. Combi, Dominique Bockelée-Morvan, Sean N. Raymond, Michael

Zolensky, 2024-12-17 Comets III brings a comprehensive update to the latest breakthroughs in comet science over the last twenty years and showcases how recent space missions and advancements in telescopic observations have revolutionized our understanding of these celestial bodies. With the contributions of more than eighty authors spanning twenty five chapters, Comets III investigates the early solar system origins of comets and the clues provided by the composition and distribution of their present population for their long term dynamical evolution and interrelations with other members of the solar system. Organized thematically each section is designed to enable connections across disciplinary boundaries in both planetary science and planetary formation astrophysics. This comprehensive volume explores recent advancements in space missions, telescopic observations and robotic surveys providing new understandings of the origins and dynamics of comets. Intended for both researchers and students, Comets III offers insights into unresolved questions and sets the stage for future advancements.

Current Aspects of Exobiology G. Mamikunian, M. H. Briggs, 2013-10-02 Current Aspects of Exobiology covers the philosophical aspects scientific approach and related research problems in exobiology. Most of the chapters are presented at the Current Research in Exobiology Symposium held at the Jet Propulsion Laboratory on February 26-28, 1963. This book is composed of 10 chapters and begins with an overview of the nature and occurrence of extraterrestrial living matter. The next chapters survey certain lines of evidence concerning extraterrestrial life including investigation of organo-chemical evolution, organic remains in meteorites, microorganisms of Middle Precambrian Age and the survival capabilities and the performance of earth organisms in simulated extraterrestrial environments. These topics are followed by discussions on the interesting issues on the possibility of a primordial lunar life and the possibilities of life on Mars. A chapter considers the various scientific efforts to detect life outside earth including experiments on small unmanned biological laboratories to the surfaces of the planets. Another chapter looks into the possibility of the accidental introduction of terrestrial microorganisms to other planets during the course of space exploration by unmanned spacecraft. The concluding chapters explore the potential of radio search for other intelligent species in space. Exobiologists and researchers in the related fields of exobiology who are interested in extraterrestrial life will find this book invaluable.
