Thermodynamics of Pharmaceutical Systems Kenneth A. Connors, 2003-03-19 Studies of thermodynamics often fail to demonstrate how the mathematical intricacies of the subject relate to practical laboratory applications. *Thermodynamics of Pharmaceutical Systems* makes these connections clear, emphasizing specific applications to pharmaceutical systems in a study created specifically for contemporary curriculums at colleges of pharmacy. Students investigating drug discovery, drug delivery and drug action will benefit from Kenneth Connors's authoritative treatment of the fundamentals of thermodynamics as well as his attention to drug molecules and experimental considerations. An extensive appendix that reviews the mathematics needed to master the pharmacy curriculum proves an invaluable reference. Connors divides his one-of-a-kind text into three sections: Basic Thermodynamics, Thermodynamics of Physical Processes and Thermodynamics of Chemical Processes. Chapters include Energy and the First Law of Thermodynamics, The Entropy Concept, Phase Transformations, Solubility, Acid-Base Equilibria, Noncovalent Binding Equilibria, Thermodynamics need not be a mystery nor be confined to the realm of mathematical theory. *Thermodynamics of Pharmaceutical Systems* introduces students of pharmacy to the profound thermodynamic applications in the laboratory while also serving as a handy resource for practicing researchers

Untangling Complex Systems Pier Luigi Gentili, 2018-09-03 Complex Systems are natural systems that science is unable to describe exhaustively. Examples of Complex Systems are both unicellular and multicellular living beings, human brains, human immune systems, ecosystems, human societies, the global economy, the climate and geology of our planet. This book is an account of a marvelous interdisciplinary journey the author made to understand properties of the Complex Systems. He has undertaken his trip equipped with the fundamental principles of physical chemistry, in particular the Second Law of Thermodynamics that describes the spontaneous evolution of our universe and the tools of Non linear dynamics. By dealing with many disciplines, in particular chemistry, biology, physics, economy and philosophy, the author demonstrates that Complex Systems are intertwined networks working in out-of-equilibrium conditions which exhibit emergent properties such as self-organization phenomena and chaotic behaviors in time and space

Green Technologies for the Defluoridation of Water Mohammad Hadi Dehghani, Rama Rao Karri, Eder Claudio Lima, 2021-07-17 *Green Technologies for the Defluoridation of Water* focuses on the application of green technologies for the defluoridation of water using adsorption processes and nano-adsorbents. Chapters cover the environmental and health effects of fluoride presence in ambient air, food, water, soil and vegetation, focus on approaches for analytical methods to determine the presence

of fluoride in water review various types of conventional and advanced techniques used for removal focus on adsorption as a green technology review various types of adsorbents and emphasize a techno economic assessment with respect to conventional and non conventional technologies This book provides readers with comprehensive methods and applications while also presenting the global impacts of fluoride ion on the environment including in drinking water food air soil and vegetables The authors compare different defluoridation technologies in detail providing researchers in environmental science and nanotechnology fields with the information they need to create solutions on how to safely remove fluoride from water in a sustainable and cost effective way Presents the application of green technology for the defluoridation of water using adsorption processes and nanoadsorbents Includes methods for effectively removing fluoride ions from potable water and water bodies Provides techniques that are eco friendly without toxic chemicals and with lower cost options

Physico-chemical Aspects of Textile Coloration Stephen M. Burkinshaw,2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration
