**Iterated Integrals and Homotopy Periods** Richard Martin Hain, 1984      **Collected Papers of K.T. Chen** Kuo-Tsai Chen, Philippe Tondeur, 2001-06-21 Kuo Tsai Chen 1923 1987 is best known to the mathematics community for his work on iterated integrals and power series connections in conjunction with his research on the cohomology of loop spaces His work is intimately related to the theory of minimal models as developed by Dennis Sullivan whose own work was in part inspired by the research of Chen An outstanding and original mathematician Chen s work falls naturally into three periods his early work on group theory and links in the three sphere his subsequent work on formal differential equations which gradually developed into his most powerful and important work and his work on iterated integrals and homotopy theory which occupied him for the last twenty years of his life The goal of Chen s iterated integrals program which is a de Rham theory for path spaces was to study the interaction of topology and analysis through path integration The present volume is a comprehensive collection of Chen s mathematical publications preceded by an article The Life and Work of Kuo Tsai Chen placing his work and research interests into their proper context and demonstrating the power and scope of his influence

**Algebraic Models in Geometry** Yves Félix, John Oprea, Daniel Tanré, 2008-03-13 Rational homotopy is a very powerful tool for differential topology and geometry This text aims to provide graduates and researchers with the tools necessary for the use of rational homotopy in geometry Algebraic Models in Geometry has been written for topologists who are drawn to geometrical problems amenable to topological methods and also for geometers who are faced with problems requiring topological approaches and thus need a simple and concrete introduction to rational homotopy This is essentially a book of applications Geodesics curvature embeddings of manifolds blow ups complex and Kähler manifolds symplectic geometry torus actions configurations and arrangements are all covered The chapters related to these subjects act as an introduction to the topic a survey and a guide to the literature But no matter what the particular subject is the central theme of the book persists namely there is a beautiful connection between geometry and rational homotopy which both serves to solve geometric problems and spur the development of topological methods      *A Topological Chern-Weil Theory* Anthony Valiant Phillips, David A. Stone, 1993 We examine the general problem of computing characteristic invariants of principal bundles whose structural group  $G$  is a topological group Under the hypothesis that  $G$  has real cohomology finitely generated as an  $R$  module we are able to give a completely topological local method for computing representative cocycles for real characteristic classes our method applies for example to the homologically 10 dimensional non Lie group of Hilbert Roitberg Stasheff      *Fields Medalists' Lectures, 2nd Edition* Michael Atiyah, Daniel Jagolnitzer, 2003-11-03 Although the Fields Medal does not have the same public recognition as the Nobel Prizes they share a similar intellectual standing It is restricted to one field that of mathematics and an age limit of 40 has become an accepted tradition Mathematics has in the main been interpreted as pure mathematics and this is not so unreasonable since major

contributions in some applied areas can be and have been recognized with Nobel Prizes A list of Fields Medallists and their contributions provides a bird's eye view of mathematics over the past 60 years It highlights the areas in which at various times greatest progress has been made This volume does not pretend to be comprehensive nor is it a historical document On the other hand it presents contributions from Fields Medallists and so provides a highly interesting and varied picture The second edition of Fields Medallists Lectures features additional contributions from the following Medallists Kunihiko Kodaira 1954 Richard E Borcherds 1998 William T Gowers 1998 Maxim Kontsevich 1998 Curtis T McMullen 1998 and Vladimir Voevodsky 2002

Bimonoids for Hyperplane Arrangements Marcelo Aguiar, Swapneel Mahajan, 2020-03-19 The goal of this monograph is to develop Hopf theory in a new setting which features centrally a real hyperplane arrangement The new theory is parallel to the classical theory of connected Hopf algebras and relates to it when specialized to the braid arrangement Joyal's theory of combinatorial species ideas from Tits theory of buildings and Rota's work on incidence algebras inspire and find a common expression in this theory The authors introduce notions of monoid comonoid bimonoid and Lie monoid relative to a fixed hyperplane arrangement They also construct universal bimonoids by using generalizations of the classical notions of shuffle and quasishuffle and establish the Borel Hopf Poincaré Birkhoff Witt and Cartier-Milnor-Moore theorems in this setting This monograph opens a vast new area of research It will be of interest to students and researchers working in the areas of hyperplane arrangements semigroup theory Hopf algebras algebraic Lie theory operads and category theory

*Maurer-Cartan Methods in Deformation Theory* Vladimir Dotsenko, Sergey Shadrin, Bruno Vallette, 2023-09-07 Covering an exceptional range of topics this text provides a unique overview of the Maurer-Cartan methods in algebra geometry topology and mathematical physics It offers a new conceptual treatment of the twisting procedure guiding the reader through various versions with the help of plentiful motivating examples for graduate students as well as researchers Topics covered include a novel approach to the twisting procedure for operads leading to Kontsevich graph homology and a description of the twisting procedure for homotopy associative algebras or homotopy Lie algebras using the biggest deformation gauge group ever considered The book concludes with concise surveys of recent applications in areas including higher category theory and deformation theory
